Experienced Python Developer with over three years of expertise in building scalable software applications across various domains. With eight months of hands-on experience in AI/ML, I have developed advanced systems, including an AI-powered document retrieval chatbot, intelligent task scheduling agents, and personalized recommendation system. I am committed to continuous learning and delivering innovative, data-driven solutions that enhance user experience and efficiency.

Experience

AI/ML Engineer: - E-Team Informatica India (P) LTD Technopark, Kerala

August 2024 – May 2025

- *AI-powered internal document retrieval chatbot*
 - Designed and implemented an AI-driven internal document search solution using the Retrieval Augmented Generation (RAG) approach, enabling conversational search over 1,000+ internal documents.
 - Extracted and chunked document text, generated text embeddings, and stored them in a VM-hosted vector database.
 - Applied semantic similarity search to retrieve contextually relevant results for over 500 monthly user queries.
 - Delivered accurate, real-time responses through a prompt-based LLM and web chatbot interface, achieving a 5% reduction in response time.
- *AI Scheduling and Task Management Agent*
 - Built a voice-enabled scheduling and task management agent integrating natural language processing (NLP) with Google Calendar for automated schedule optimization.
 - Constructed the solution using React (frontend), Flask (backend), and Dialogflow, resulting in a 15% reduction in scheduling conflicts.
 - Planned scalability through future migration to a Rasa-based framework capable of handling 1,000+ concurrent users.
- *Article recommendation system*
 - Developed an intelligent article recommendation system using clustering techniques to group similar content based on user behavior and text embeddings.
 - Applied NLP techniques and vectorization to personalize content recommendations, increasing user click-through rates by 12%.

Python Developer: - Imayas Itech Pvt. Ltd. Bangalore, Karnataka

August 2022 – July 2024

- Designed, tested, and maintained Python-based applications, including custom ERP systems serving 10+ departments.
- Integrated front-end components with server-side logic to support 100+ active users daily.
- Collaborated with cross-functional teams to define, design, and deliver new features.
- Applied DevOps practices, performed data wrangling with Python, and utilized cloud services.
- Optimized backend logic, improving application performance by 18% and reducing load time.

- Participated in code reviews and contributed to the continuous improvement of the development process.
- Prepared 100+ technical documents to aid knowledge sharing and maintenance.

**Junior Data Scientist: - Rubixe Technologies
Bangalore, Karnataka**

October 2021– June 2022

- Engineered and optimized machine learning algorithms and models for large-scale applications.
- Built and evaluated machine learning models using structured and unstructured data to address business challenges and drive data-informed decisions.
- Applied MLOps principles and tools to implement CI/CD pipelines for automating machine learning workflows.
- Conducted evaluation and tuning, increasing model accuracy by up to 10%.
- Delivered insights and visualizations that impacted business strategy for over 5 key stakeholders.
- Deployed models into production, maintaining 99.9% uptime and efficient scaling.

Education

- **Mahatma Gandhi University, MSc Mathematics** **2019 - 2021**
- **Mahatma Gandhi University, BSc Computer Applications (Triple Main)** **2016 - 2019**
Mathematics, Statistics & Computer Science

Certification

- **Certified Data Scientist:** IABAC(International Association of Business Analytics Certification)
- **Data Science Foundation:** IABAC(International Association of Business Analytics Certification)
- **Certified Data Scientist Training Certification:** Datamites, Bangalore, Karnataka

Technical Skills

- **Programming Languages:** Python, C, C++, Java, JavaScript
- **Machine Learning Algorithms:** Supervised, Unsupervised, and Reinforcement learning.
- **AI Technologies:** LLM, NLP, LangChain, OpenAI, Hugging Face
- **Web Frameworks:** Django, Flask, FastAPI
- **Data Analysis & Visualization:** Pandas, NumPy, Seaborn, Matplotlib, Power BI, Tableau
- **Machine Learning & Deep Learning:** Scikit-learn, TensorFlow, Keras, PyTorch
- **Development Tools:** Jupyter Notebook, Google Colab, PyCharm, MS Excel
- **Data Processing:** Data Collection, Data Cleaning, Data Preprocessing, Feature Engineering
- **Databases:** MySQL, PostgreSQL, NoSQL, MongoDB
- **Vector Databases:** FAISS, Pinecone, PGVector, Chroma
- **Cloud platforms:** AWS, Azure, GCP
- **Containerization & Deployment:** Docker, Kubernetes, Containerized ML Deployments
- **MLOps & CI/CD:** MLOps Principles, CI/CD Pipelines
- **Version Control:** Git, GitHub
