TECHNICAL SKILLS

Languages

Python, Java, C, C++, Sql, HTML, CSS, Javascript

Frameworks/Libraries

FastAPI, Django, Numpy, Pandas

Miscellellanious

Git, VS Code, Pycharm, Jupyter Notebook, Redash

COURSEWORK/SKILLS

- Operating Systems
- Data Structures & Algorithms
- Database Management System
- OOPS Concept
- Machine learning
- Artificial Intelligence
- Data Analytics
- Core Java
- C Programming

WORK EXPERIENCE

Junior Data Scientist 03/2025 - Present

Znorm AI

- Developed and deployed GenAI/LLM applications using FastAPI for real-time inference and intelligent query handling.
- Built and containerized AI services with MCP Server and Docker, ensuring scalability and reproducibility.
- Conducted data analysis and ML modeling (EDA, predictive models, visualization) to generate actionable business insights.

Internship on ML and AI 05/2023 - 06/2023

ICT Academy of Kerala

- Developed ML models for predictive analytics, boosting accuracy over baseline methods.
- Improved loan approval prediction accuracy through data analysis, preprocessing, and K-Nearest Neighbors fine-tuning, achieving 61% accuracy.
- Contributed innovative ideas to refine and enhance existing ML algorithms and techniques during collaborative brainstorming sessions.

EDUCATION

College of Engineering Vadakara

B.Tech Computer Science and Engineering
2020-2024

Kozhikode, Kerala

Iringannur Higher Secondary School

Science

2018-2020

Kozhikode, Kerala

CERTIFICATIONS

- [Microsoft AI Classroom Series](#).
- [IEEE Xplore 15.0 \(Programming competition\)](#)

PROJECTS

Opinion Mining in Online Shopping 11/2023-05/2024

Python(Django), MySql

- Implemented sentiment analysis APIs, integrating pre-trained models for efficient sentiment classification.
- Features include product recommendation, review summarization, history tracking of analyzed reviews, multi-language support, word cloud generation, and visual representation capabilities.
- Employed Python libraries: Matplotlib for customizable visualizations, BeautifulSoup for real-time web scraping, Pandas for comprehensive data manipulation, and NLTK for natural language processing.
- Implemented VADER for rule-based sentiment analysis, efficiently assigning sentiment scores from pre-built dictionaries and handling nuances like sarcasm.

Hospital Management System 04/2023-08/2023

Python(Django), MySql

- The website enables patients to book appointments online, check real-time doctor availability, and receive instant confirmations.
- MySql used for storing, managing and retrieving structured data of patients and doctors.
- Used Django for backend development, managing server logic, database communication, and static content delivery with WhiteNoise.
- Digital solutions could include features such as online payment for medical bills and access to electronic health records.

EXTRACURRICULAR

Accenture North America Data Analytics and Visualization Job Simulation August 2024

- Cleaned, modeled, and analyzed 7 datasets to identify content trends for strategic decisions.
- Created a PowerPoint deck and video presentation to convey insights to stakeholders.

Cognizant Artificial Intelligence Job Simulation September 2024

- Performed exploratory data analysis in Python for Cognizant's client, Gala Groceries.
- Developed a Python module to train a RandomForest Regressor and output performance metrics.
- Presented findings and analysis in a PowerPoint slide for the business.

ORGANIZATIONS

IEEE SB CEV 12/2020-04/2023

Volunteer

IEEE PES SBC CEV 02/2022-04/2023

Vice Chair
