EXPERIENCE

Generative AI Engineer

Career Genie

📅 October 2023 - Present 📍 Work From Home

- Created a roadmap for students who need career advice tailored to their specific career goals, pathways, skills, and resumes. Each plan includes tasks that are directly aligned with the student's career objectives. These plans and tasks are generated using function calling by gpt-4o(OpenAI).
- Developed a resume checker using gpt-3.5 turbo(OpenAI) function calling, designed to assist job seekers in enhancing their resumes. This tool focuses on improving the readability, organization of sections, and representation of skills.
- Developed a mock interview tool designed to prepare users for interviews in their desired job roles. Utilizing using gpt-4o(OpenAI), this tool generates questions tailored to the users' experience and skills. Users' responses are evaluated using the STAR (Situation, Task, Action, Response) method, and the tool provides enhanced answers to help users improve their interview performance.
- Developed a chatbot using gpt-4o(OpenAI), that is tailored to identify users' immediate needs and provide real-time assistance with resumes, job applications, skill-building, and interview preparation.

Machine Learning Engineer

Huzzle

📅 January 2022 - October 2023 📍 Work From Home

- Building a recommendation system for students to recommend jobs, internships, events based on their skills, career goals and interest. And we have used NLP techniques like keybert, word2vec to build the recommendation system.
- Abstractive text summarization methods are used to summarize job description so students don't have to read the whole text.
- Created a flask application of the recommendation system for direct human evaluation. And it is used by students for testing so we can understand the issue and we can solve it before production.
- Working on a custom NER model using spacy to avoid biasing towards other topics than job related topics.
- Lead a team of 5 people for recommendation system project.

Machine Learning Engineer

Wooy

📅 May 2020 - January 2022 📍 Kochi, India

- Developed a vehicle optimisation tool using OR tools (Operations Research tool) for delivery agents to optimise the time and cost.

SKILLS

Python, LLM, Vector DB, Machine Learning, Tensorflow, RESTAPI ●●●●●

Computer Vision, Pgsql, MongoDB, Java, Langchain
Alexa, AWS, Pytorch, Streamlit ●●●●●

EDUCATION / COURSES

MSc Computer Science, Machine Intelligence Specialization

IIITM-K

📅 June 2018 - Dec 2023

Bachelor of Science, Physics

Mahatma Gandhi University, Kottayam

📅 June 2015 - May 2018

ACHIEVEMENTS

- Won Second Prize for Hackathon (Data Structures) conducted by Byju's and Fresh World..

PROJECTS

Recipe Generator *

- Created a recipe generator using GPT-4 that crafts customized recipes based on user inputs such as the number of servings, available utensils, ingredients, and desired cooking time.

Github Analysis *

- Analysing the python code inside a github repository using OpenAI and Langchain.

Satellite Image classification in Matlab

- I have used computer vision toolbox and deep learning toolbox to classify images.

Speech Recognition using AutoNlp

- I have used hugging face api token to train speech recognition models using AutoNlp.

Outlook automation using python

- Using pywin32 and win32 in python I was able to fully automate email creation in outlook.

Speech to Sign

- Using Google API converted the audio to text and parse the text accordingly to find out the right label from a predefined dataset provided from ISL.
- Developed a simple web app to convert speech to sign.

- Credit Risk Analysis have been performed on every user using data such as frequency in buying goods, total bill amount in a month to develop a system to provide goods in a credit system to the user.
 - Developed a basic chatbot to understand the intent of user and to do the respected service using Rasa 1.0
 - Scrapped prices of different grocery items to compare with price we have in our database.
-

Data Science Intern

Hackstrap Technologies Pvt. Ltd.

 Oct 2019 – April 2020  Telengana, India

- Extractive text summarization on different startup news articles.
 - NER on news articles to find where organisation is located and how much they got funded and some other details of a startup
-

Computer Vision Intern

Neuroplex Pvt. Ltd.

 April 2019 – June 2019  Trivandrum, India

- Automatic License/Number Plate Recognition (ANPR) system using OpenCV, YOLOv3 and Python.
