OBJECTIVE

Software engineer with a 5-year year track record in full-stack development, eager to bring technical prowess to the table and enhance groundbreaking projects.

SKILLS

- Programming language: Python, JavaScript
- Frontend Frameworks: ReactJS, AngularJS
- Backend Frameworks: Django, Nodejs, Loopback, Expressjs, Flask
- Mobile Technology frameworks: React Native, Ionic Cordova, Flutter
- Tools: Git, Linux commands
- Database technologies : MySQL, PostgreSQL, MongoDB
- Cloud : AWS

EXPERIENCE

August 2024 - Present

- **Software engineer**
IoMarket Software services
Archive application:
Led a 5-member team in the development of an archive application featuring advanced search functionality and robust file handling capabilities (version control, metadata extraction, and security measures). Successfully delivered a user-friendly and efficient solution with a focus on collaboration and agile development methodologies.

December 2019 -
August 2024

- **Software Engineer**
Innovation incubator Advisory
1. Gogo Car (Automotive Dealership Solutions)
- Website: www.gogocar.com

Dealerships seamlessly onboard their business, utilizing data from various aspects such as inventory, sales, and service. This enables customers to experience a comprehensive online vehicle buying journey, including options from lenders and insurance packages.

Key Contributions:
- Dealer Discount: Implemented dealership rules for vehicle discounts based on the buying journey.
- Quick Buy: Introduced a feature allowing users to view and receive a prompt callback for selected buying options.
- Dealership Settings: Enhanced control over features in the vehicle buying journey through setting updates.
- Dealer Control Centre Feature Packaging: Developed feature access based on plan selection for the retail site.
- Customer Clustering Recommendation: Implemented rules for email marketing based on customer clustering.

Tech Stack:
- Frontend: Angular, React
- Backend: Loopback, Express, Python
- Cloud: AWS
- Database: MySQL

2. Trellis DataConductor (Document Management System)
- Website: www.trellisplatform.com/trellis-dataconductor

Streamlined document management with an evaluation and correction flow.

Key Contributions:

- Database Design
- CRUD APIs for users and documents
- Single Sign-On (SSO) login from client app
- Google and AWS integration for storage and authentication
- API for file explorer-type navigation for uploaded files
- Frontend API binding

Tech Stack:

- Frontend: React
- Backend: Django
- Database: PostgreSQL
- Cloud: Google Cloud, AWS

3. StyleAssists

- Website: www.styleassists.ai

Offering personalized style recommendations and assistance from professional stylists.

Key Contributions:

- Wardrobe web-like search and filter feature
- Utilized OpenAI API and PostgreSQL searchable field for enhanced search functionality
- Comment section for user engagement

Tech Stack:

- Frontend: Flutter
- Backend: AWS Cloud Function

September 2019 -
November 2019

- **Technical operations**

Innovation Incubator Advisory

Developing automation workflow using an in-house RPA application for automating us healthcare billing software.

PROJECTS

- **Student community chat Bot (Open source)**

Contributed profanity filter feature to discord channel for student community on Gtech Mulearn.

ACHIEVEMENTS & AWARDS

- KSEB-NSS Save Energy Cycling Campaign # The KSEB-NSS Save Energy Cycling Campaign involved a 700km cycling journey from Kasargod to Trivandrum, aiming to spread awareness about energy conservation. The cyclists conveyed the message of using electricity judiciously to promote energy-saving practices.
- Openschooling.org # OpenSchooling.org is a non-profit organization dedicated to offering free online tuition and providing essential equipment to students during the COVID

pandemic. In its two years of operation, students have achieved commendable results.
