04/2024 – 05/2024	Internship in python <i>Keltron palakkad</i>
	• Introduction to python, its features, application in python and basics of python.

Skills

Languages/tools/framework/concepts C, Java, python, android, ui XML designing, OOPS, SDLC	Database management SQL, PostgreSQL
Communication skill.	work ethic
	Problem solving skill

Languages

- English, Malayalam, Tamil

Certificates

Python programming Internship from keltron	Foundation in cyber security analyst
Tech lab initiative Android with compose	International conference IoT paper presentation

Projects

Neighbour net

Digital platform to strengthen community Bond through technology

- NeighbourNet is an AI-powered digital platform designed to strengthen community bonds by connecting individuals in need of help (Seekers) with those willing to offer assistance (Helpers) within a specific locality. The app promotes role-based interactions.
- Key functionalities include an Emergency Response System with real-time alerts, in-app messaging activated after task acceptance, recurring task management for continuous support, and a transparent rating system to maintain trust.
- Developed using Kotlin on Android Studio for the frontend. The user interface is designed using XML. The interactive UI is designed for user-friendly experience. NeighbourNet's backend is built using Flask with PostgreSQL as the primary database.
