OBJECTIVE

Enthusiastic M.Sc. Computer Science student, currently pursuing Software Testing (Manual Automation) with ISTQB. Skilled in Python, SQL, and AI/ML, with strong problem-solving, teamwork, and communication skills. Passionate about applying data analytics, machine learning, and software testing to real-world challenges while contributing effectively to IT projects.

EDUCATION

Master of Computer Science , ST.Joseph's College Devagiri	07/2023-
-Secured A+ Grade ,CGPA(Out of 5): 4.05	05/2025
Bachelor of Computer Science ,Providence Women's College	2020- 2023
-Secured A Grade ,CGPA(Out of 10): 8.325	

SKILLS

Technical Skills	Manual Testing,Selenium WebDriver with Java,Appium,Apache JMeter,Trello,AI/ML,Python,SQL
Soft Skills	Analytical thinking, Collaboration and teamwork, Time management, Problem-solving

EXPERIENCE

Bussiness Associate	April 2025 - June 2025
Rayland	<i>Calicut,Kerala</i>
• Built strong client relationships, improving retention and satisfaction. • Contributed to revenue growth by identifying new business opportunities. • Streamlined processes, reducing turnaround time and boosting productivity.	

PROJECTS

Lung Cancer Risk Prediction Using Advanced Ensemble Learning The lung cancer prediction project uses ensemble learning and Explainable AI (XAI) to classify cases as benign, malignant, or normal, and assess risk levels (low, medium, high). It processes structured clinical data with preprocessing, feature selection, SMOTE balancing, and model training using Random Forest, XGBoost, and others. XAI tools like SHAP and LIME ensure model transparency, aiding in accurate and interpretable medical decision-making.

Loan status prediction Developed an automated loan eligibility prediction system that achieved 82.27accuracy. The model utilized Random Forest for classification and GridSearchCV for hyperparameter tuning to optimize performance. The system processed customer data to predict loan approval outcomes, enhancing decision-making efficiency and accuracy.

Smart Lab. SMART LAB is an innovative system developed using Python and Android to monitor students in the lab and ensure they are working on their assigned tasks. It captures screenshots of their activities, sends them to an authorized computer for review, and dynamically assigns labs to students based on their progress.

Sports Image Classifier. Developed a deep learning model using CNN with 96 into 8 sports categories, including data visualization, model training, and prediction evaluation

INTERNSHIP

- **Internship student** ICT Academy of Kerala
- Developed a high accuracy prediction models applying AI/ML concepts
- Conducted data preprocessing ,visualization and performance evaluation of datasets.

ACHIEVEMENTS

- Won First Prize in Paper Presentation at TECHNORA 2.0 for the topic "Harnessing IoT for Disaster Tracking and Patient Assistance."

PRESENTATIONS

- "AI's Impact On Society:Socio-Economic Inequality,Employment,and Social Structures"-1st Annual Student's Conference on Social Sciences and AI,Sree Kerala Varma College,Thrissur
- "Lung Cancer Risk Prediction Using Advanced Ensemble Learning"-presented in Tech fest conducted at University Of Calicut

CERTIFICATIONS

- Python for Data Science and Analytics (12 weeks)- Academic year 2023-2024 • MERN Stack Certification (12 weeks)- Academic year 2024-2025 • AI/ML Certification (5 weeks) - ICTAK, August 2024
- Currently pursuing Manual and Automation Testing with ISTQB
