PROFILE

A dedicated Software Engineer with 4.5 years of experience in developing and deploying web applications using PHP, Angular, and React. Skilled in managing server-side architectures and integrating front-end systems seamlessly. Proficient at solving technical challenges and delivering high-quality solutions. Focused on contributing expertise to achieve organizational success.

EDUCATION

08/2016 – 04/2020

Bachelor of Engineering: Department of Mechatronics Engineering
AKSHAYA COLLEGE E&T

2015 – 2016

HSC
KONGU VELLALAR MHSS

SKILLS

- PHP
- Docker
- Node JS
- Postgress DB
- Angular JS
- Jmeter for stress testing
- Laravel
- SQL and MySQL
- React JS
- Mongo DB

PROFESSIONAL EXPERIENCE

05/2023 – present

Confianz Information Technologies Pvt. Ltd.
Software Engineer

Working as a Software Engineer for developing projects as a full stack using PHP and Angular.

Working on integrating third party API and upgrading the current features to current technology.

2022 – 2023

Cloudin Software Tech Labs Pvt ltd
Backend Developer

Worked as a Backend developer using Laravel (PHP framework) to create RESTFUL - API for front-end integration and admin panels using Laravel blades.

Worked on creating and maintain multiple hosting servers with ubuntu VM on DigitalOcean providers, as well as hosting and managing both front-end and back-end projects.

2020 – 2022

TealOrca Software Solutions pvt ltd

Junior Software Developer

Worked in creating and managing RESTFUL - API for front-end integration using Laravel.

Worked on creating admin panels with user interfaces for the users using Laravel Blades.

PROJECTS

Unified Communication Platform by Stackbench

Contributed as a Full Stack Developer to manage existing features and implement new functionalities based on product requirements. Enhanced platform capabilities by integrating third-party services such as weather synchronization and notifications. Led the development of scalable solutions to improve system performance and handle increased user demands. Optimized feature updates and ensured seamless integration with external APIs. Collaborated with cross-functional teams to deliver a robust and efficient communication platform tailored to user needs.

C - Fin

(Financial Income and Experience Management Tool)

Developed and maintained the backend infrastructure for a financial income and experience management tool, focusing on creating robust APIs to support seamless app functionality. Implemented secure and efficient server-side logic to handle data processing and transactions, ensuring high performance and scalability. Oversaw server hosting and management, optimizing uptime, and maintaining system reliability. Collaborated closely with the front-end team to integrate APIs, enabling a smooth and user-friendly experience. Played a key role in delivering a reliable and secure solution for managing financial and experiential data effectively.

Greenbound

(Bond and Agreement Generation Tool)

Developed an automated agreement generation system to streamline the creation of bond agreements in PDF format. Implemented features for dynamic document creation, including template customization and auto-population of data. Integrated Adobe's digital signature functionality to ensure secure and legally compliant signing processes. Focused on optimizing workflows to improve efficiency and reduce manual effort. Played a key role in delivering a reliable and user-friendly solution for managing agreements seamlessly.

Crypto Track

Worked as a Backend API Developer to design and deliver APIs for a cryptocurrency tracking application. Integrated third-party APIs to fetch real-time cryptocurrency data, ensuring accurate and up-to-date information for users. Managed server hosting, deployment, and maintenance to ensure high availability and optimal performance. Focused on building scalable, secure, and efficient server-side solutions to support seamless application functionality. Contributed to creating a reliable platform for monitoring cryptocurrency trends.

C Bazaar

Served as a Backend API Developer, delivering APIs to power the application and managing server hosting and maintenance. Designed and implemented dynamic forms for loan applications, tailored to users' income modes, with real-time validations. Streamlined form submissions by integrating third-party APIs, enabling seamless lead conversion for banks. Ensured efficient server-side processing, scalability, and secure data handling to support the platform's functionality. Played a critical role in creating a user-friendly and reliable system for loan application management.
