8 months+ Experience as a Data Research Executive, MCA graduate skilled in data analytics, Python, and SQL. Proficient in web scraping, GCP, Google Sheets, and Power BI for data manipulation and visualization. Experienced in building ML/DL models, predictive analytics and deploying production-ready solutions. Adept at transforming data into actionable insights and optimizing processes with cutting-edge technologies.

WORK EXPERIENCE

Data Research Executive

APAC BUSINESS HEADLINES

📅 June 2024 – Feb 2025 📍 Bengaluru, Karnataka

- Created various Web scraping/Web automation scripts to extract data from websites-Using Python Libraries such as Selenium, Bs4, pandas etc.
- The raw data is then mined and implemented Data cleaning for accuracy.
- Worked with ML/DL models to predict the correctness of the data collected by scraping.
- Tracked and analyzed user reviews and feedbacks using Natural language processing-sentimental analysis implemented using python transformers.
- Connected with Google clouds to store the data effectively.
- Worked with advanced Google sheets and Microsoft Excel.
- Training and Development: Experience in training colleagues and sharing knowledge to enhance team capabilities and directed them for better outcomes.
- Led successful project teams, ensuring on-time delivery, developed efficient project plans. Aligned projects with goals, which made 70% less human effort for project completion and 200% productivity.
- Kept detailed records of daily progress to identify and correct areas needing improvement. Maximized performance by monitoring daily activities and mentoring team members.

PROJECTS

CROP DISEASE AND YIELD PREDICTION

- Developed a website with system integrating machine learning and deep learning models to predict crop diseases and yields.
- Collected diverse data sources including weather, soil, crop types, disease records, and yield data from various places in India.
- Training models to identify disease patterns and forecast yields, aiding farmers in decision making.
- Implemented The model Graphical User Interface using Flask.

SELENIUM-BASED WEB SCRAPER BOT

- A Selenium-based scraper bot is an automated program designed to interact with websites like a human user but operates without manual intervention.
- It can navigate pages, fill forms, click buttons, extract data of specific pattern or type, and handle dynamically loaded content.
- Managed proxies for executing undetected data extraction.
- This bot is useful for tasks such as web scraping, automating repetitive online tasks, or gathering data from websites that rely on JavaScript for loading content.

EDUCATION

Master of Computer Application

Pondicherry University

2022-2024 📍 Puducherry

BSc Computer Science

Kannur University

2019-2021 📍 Kannur, Kerala

SKILLS

- Python, SQL, JavaScript
- Web scraping/Web Automation.
- Data wrangling/Mining.
- Project Management.
- Machine Learning.
- Deep learning.
- Artificial Intelligence.
- Spreadsheets.
- Natural language Processing.
- Google cloud Platform.
- Data Analytics.
- Data Science.
- Data Visualization & Reporting (Power BI &Tableau).
- Git

CERTIFICATION

DATA SCIENCE FOR ENGINEERS

2024(JAN-MAR)

NPTEL

LANGUAGES

- English
- Hindi
- Malayalam
- Tamil
