

Amruthesh K S | Senior Python API Developer

Kerala, India | +91-70344-13731 | @mail: eashwerks@gmail.com | @linkedin: eashwerks | @github:eashwerks

PROFESSIONAL SUMMARY

Python Django developer with extensive experience in backend development. Demonstrates strong aptitude for understanding and executing project concepts, consistently delivering well-documented and thoroughly tested code. A product enthusiast who has worked on a variety of projects, including significant contributions to an open-source initiative. Expertise in Agile methodologies, excelling as a collaborative and effective team player. Passionate about optimizing performance and ensuring seamless integration across diverse applications, always striving to drive innovation and efficiency.

TECHNICAL SKILLS

Skills : Python scripting, REST-API development, ORM, Databases

Frameworks and packages : Django, FastAPI, Sql-alchemy, Celery, Pandas, Pydantic, pytest

Tools : Git, Docker, Swagger, Jira, Postman, Debugging using IDEs (Pycharm, vscode)

Databases : Neo4j, Elasticsearch DB, Redis, Postgres

Others : AWS(EC2, S3, Lambda, Cloudwatch, Queues), Linux, OAuth2, OIDC, SSO

EXPERIENCE

Senior Software Engineer | *io-market software services*

July 2024 – Present

- Designed and developed a serverless system for archiving millions of documents with rapid search functionality, leveraging AWS services and Elasticsearch database.
- Designed and implemented an automated email scheduling and listening service that managed sending and receiving emails for multiple companies using company-specific configurations and storing email data in a database efficiently.

Senior Backend Developer | *CIED Technologies*

May 2022 – June 2024

- Led backend development efforts for Fairfood , a Europe-based NGO, to transition their Traceability platform into an open-source solution.
- Enhanced codebase and APIs to optimize performance, with comprehensive documentation and improved test coverage.
- Developed backend infrastructure for seamless integration with multiple applications.
- Established a Single Sign-On (SSO) server using OAuth and OpenID Connect protocols, simplifying authentication and authorization across various applications. This centralized approach facilitated user management and streamlined data exchange between client applications.
- Designed and implemented APIs for product traceability and developed a versatile solution for Excel report generation, data importation, validation, and processing.

Senior Software Engineer | *Rawdata Technologies*

October 2018 – May 2022

- Contributed to various modules of the ERP product **InTEUtion**, a logistics software encompassing cargo-container management, repair, tracking, shipment schedules, cargo-booking, and invoicing.
- Optimized multiple APIs to enhance performance and user experience.
- Developed APIs for integration with the **Customer Portal** application, ensuring compatibility with diverse shipping-logistics software and enabling worldwide self-service and customer support via a web application.
- Designed and implemented a tool for documenting API-page mappings, facilitating future reference and streamlined tracking. This initiative enhanced productivity for over 20 employees.

INTERNSHIPS

Internship in Python Full Stack Development | *Quest Innovative Solution Pvt.*
Internship in java | *iNet technologies*

April 2018 – October 2018
February 2018

FAVOURITE PROJECTS

Trace by Fairfood (Open-Source)

@github:fairfood | @website:trace

- Trace is an innovative tool developed by Fairfood to enhance traceability within the food supply chain. It enables tracking a product's journey from origin to the consumer, empowering stakeholders to trace products back to the farmers and producers.
- Trace logs every transaction utilising blockchain technology, ensuring transparency and accountability throughout the supply chain. This tool plays a crucial role in promoting ethical sourcing, sustainability, and consumer confidence in the food industry.

InTEUtion

@website:inteution

- InTEUtion is an ERP product developed as a comprehensive logistics software solution. It encompasses various functionalities including cargo-container management and repair, tracking, shipment schedules, cargo-booking, and invoicing.
