Kerala, India | +918129538913 | nithinbiju58@gmail.com | [LinkedIn](#)

I am a software engineer with 3 years of experience in front-end and back-end development. Experience in web development with React, and I am also experienced in backend development with Node.js. Highly motivated and collaborative team player with exceptional communication and interpersonal skills, adept at analyzing complex problems, finding creative solutions, and rapidly learning new skills and technologies.

AREAS OF EXPERTISE

- Web App Development and Testing
- Testing: Jest, JMeter, Unit Testing
- Data Handling and Security
- Front-End (React), Back-End (Nodejs)
- CSS Frameworks and Technologies
- Version Control Systems
- React Libraries and Frameworks
- Express.js and other frameworks
- Agile Methodologies
- Component Design and Development
- Databases: Firebase, MongoDB
- Cloud Platforms: AWS, GCP

PROFESSIONAL EXPERIENCE

Emvigo Technologies

Full Stack Developer (React, Node.js)

Kochi, Kerala

August 2021 – Present

- Working as a Technology Consultant, Level 1
- Frontend as ReactJS and Backend as NodeJS
- Worked in project start-to-end phases
- Support Discovery Team members to do a proper feasibility study and requirement analysis.
- I participated in L2 estimation as part of the development team and estimated the requirements registered in the wireframe or design.
- Client interaction, if any clarification is needed.
- Participated in scrum calls and sprint-related calls like sprint refinement, sprint planning, sprint demo, sprint retrospective, etc.
- Contribute and self-review the technical document to ensure all the points are covered.

PROJECT EXPERIENCE

Project 1: Desiweds

July 2023 – Present

- Desiweds is a web and PWA app for users where bride and groom can combine and manage their wedding events.
- Worked in PWA portal (Next JS), Admin and Vendor portal

Project 2: We Swap Any Car (Web App)

May 2023 -July 2023

- This project is an online marketplace to swap, sell, and buy cars whole across the UK.
- Analyzing user stories and wireframes provided for each sprint, and preparing a plan for each task. After giving an estimation of my work, completed all tasks within the estimated time and proceeded to unit testing before handing it to the QA and fixing all the bugs and new changes

Project 3: Momentum App (TD SYNEX)

November 2022 - May 2023

- Momentum App is a user management and sales report representation platform.
- Admin panel and mobile app based on user type.
- Worked as a full stack developer in React JS and Nodejs , AWS and MongoDB as backend services. And also provided support and documentation after completing the project.

Project 4: Refinu

November 2021 – November 2022

- Refinu is a platform where users can assess their personality, identify the areas of improvement, and improve them by using reflection and nudging tools provided by the platform.
- Admin panel and Web app
- Worked as a full stack developer in React JS and Nodejs google cloud and Firebase services as backend services. And also provided support and documentation after completing the project
