

Ankita Patil

DevOps Engineer

MOB: 7795275886 - Email: ankitapatilc147@gmail.com LinkedIn: [ankita.patil](#)

SUMMARY:

Having over all 3+ Years of experience as an AWS/DevOps Engineer, specializing in IT Infrastructure, Automation and Implementing CI/CD workflows. Eager to take on challenging role and consistently excel in my all endeavors thereby enabling growth of my colleagues, team members and the organization at large.

EDUCATION:

Bachelor of Engineering / ECE: (Aug 2017 – Aug 2021)

Visvesvaraya Technological University (CGPA: 8.98/10)

PROFFESIONAL EXPERIENCE:

Infosys Limited: (Senior Systems Engineer | NOV 2021 – Present)

In my role at Infosys, I am a versatile with expertise in AWS cloud services, I leverage tools like Terraform for provisioning, along with monitoring and optimizing cloud infrastructure. Committed to achieving personal and organizational goals.

CERTIFICATIONS:

Infosys Certified: AWS Cloud Practitioner

TECHNICAL SKILLS:

Cloud Based Environment	AWS (Amazon Web Services)
SCM	GIT, GitHub
Operating Systems	Linux, Ubuntu
CI/CD Tools	Jenkins
Containerization	Docker, Kubernetes
Configuration Management Tool	Ansible
Cloud Infrastructure	AWS Stack (EC2, S3, VPC, EBS, EFS, ELB, Cloud Watch, Route 53, IAM, Lambda, DynamoDB, KMS, ECS, Redshift, FIS)
Data Base	AWS RDS
Code Analysis	Sonarqube
IAC Tool	Terraform
Scripting	Shell Scripting and Python Scripting
Framework	Flask

INTERESTS:

Reading Books | Playing Chess | Learning New Skills/Self Improvement | Volunteering | Cooking

PROJECT EXPERIENCE:

InTegPlus-PPC-DevSecOps: (May 2022 – Present)

Project: This Project provides comprehensive DevSecOps services that integrate security protocols. Leveraging technologies like cloud services (AWS, Azure, GCP). The Solution facilitates automated vulnerability detection, and secure deployment, build and release secure application faster.

Environment: AWS cloud Infrastructure

Responsibilities:

- Launching Amazon EC2 Cloud Instances using Amazon Web Services (**Linux/ Ubuntu**) Configuring launched instances with respect to specific applications.
- Worked on **AWS EC2, VPC** Setup and Configurations, **AMI's, EBS, S3**, and Cloud Formation, ELB, Cloud watch.
- Managed **multiple AWS accounts** with **multiple VPC's** for both production and non-prod where primary objectives include automation, build, integration and cost control.
- Used **JIRA** tool to create **tickets** and assigning tasks to developers. And managed several developers.
- Create the stack using Cloud Formation Template using YAML to launch multiple Instances.
- Installed the application on AWS EC2 instances and configured the storage on S3 buckets.
- Manage the source code to have Latest version of code available from production releases.
- **Monitoring & Metrics** - Using Amazon Cloud watch, monitor infrastructure and applications such as EBS, EC2, ELB, and S3.
- Experience with **Shell & Python** for automation.
- Prepare environment specific builds and deployment for different environments with a very less down time using ELBs and High Availability clusters.
- Experience in Setting up **GIT Repository, Branching** and **Merging Model**.
- Deployed applications on AWS by using **Jenkins** pipeline.
- Created Jenkins pipeline for continuous code analysis, unit testing and packaging the source code.
- Set up Master – Adding Slave Nodes in Jenkins platform for build and optimized build time.
- Utilized Kubernetes and Docker for the runtime environment of the CI/CD to Build, Test and Deploy.

DevGuard: (Nov 2021 – Apr 2022)

- Ideated and Developed applications using technologies like **Python, Flask, Shell** within the AWS environment. My responsibilities included designing cloud applications with **RESTful APIs** and implementing micro services architecture. Ensuring smooth transition with environments.
- Conducting thorough testing and debugging to ensure **API** functionality and performance using **postman**. Implementing best practices for code organization and documentation to ensure readability and scalability.
- Used **SonarQube** to analyze the code quality and identifying potential issues related to security performance and maintainability.
- Implementing **security best practices** for code and **documentation** to ensure readability and scalability.
