PROFILE

Lead Frontend Engineer with 7.5+ years of experience designing and delivering enterprise-scale, data-intensive applications. Frontend-focused architect with strong backend foundations, capable of handling end-to-end application ownership when required.

Experienced in building high-performance Angular applications, complex UI systems, map-based platforms, and decision-support dashboards. Actively integrates AI-assisted workflows and intelligent application features to enhance data analysis, automation, and productivity, while maintaining architectural correctness, security, and scalability.

HIGHLIGHTS

- 7.5+ years of experience in frontend and application development
- Contributed to and delivered 30+ production-grade applications across multiple domains
- Designed a frontend middleware layer to centralize and standardize backend API interactions
- Built a generic API abstraction separating transport logic from UI components
- Authored Standard Operating Procedures (SOPs) for application architecture, development workflows, and best practices
- Frontend-focused architect with strong backend foundations (PHP, Django) and end-to-end application understanding
- Experience building data-heavy, performance-critical, and map-based enterprise applications
- Uses AI-assisted workflows to improve productivity and decision-support interfaces while maintaining engineering rigor

EXPERIENCE (7YRS 6MOS)

Lead Frontend Engineer - Logicplum

Nov 2023 - Present

- Leading frontend architecture for enterprise-scale applications
- Designing scalable Angular systems for complex, data-heavy use cases
- Owning frontend middleware, API abstraction layers, and internal tooling
- Driving performance optimization and architectural consistency
- Mentoring developers and reviewing architecture-level decisions
- Contributing to AI-assisted application features and decision-support interfaces
- Authoring and enforcing SOPs for application development and standards

Senior Frontend Engineer - Logicplum

Feb 2022 - Nov 2023

- Delivered and maintained multiple production-grade Angular applications
- Designed and implemented centralized API layers and reusable architecture patterns
- Led development of internal project scaffolding and standard folder structures
- Supported backend teams by debugging APIs and resolving system-level issues
- Played a key role in onboarding developers and standardizing workflows
- Contributed to architectural decisions across multiple projects

Frontend Developer- MindCoopers

Oct 2018 – Jan 2022

- Built and maintained Angular-based frontend applications
- Implemented responsive UI components and reusable modules
- Worked closely with backend teams on API integration
- Gradually took ownership of complex features and performance improvements
- Established strong frontend fundamentals that led to rapid career growth

Full Stack Developer (PHP)- Bell Technolabs

Jul 2018 – Sep 2018 (3 Months)

- Independently developed PHP-based web application features
 - Gained early experience in backend logic, server-side workflows, and databases
 - Built strong fundamentals in full-stack application development
-

TECHNICAL SKILLS

Frontend & UI Engineering

Angular 17–19, TypeScript, JavaScript (ES6+), Angular Signals, modular architecture, responsive UI systems, Tailwind CSS, PrimeNG, Highcharts, advanced data visualization, accessibility-aware UI design

Backend & Server-Side Exposure

PHP (independent project delivery), Django (production experience), REST APIs, backend debugging, data contracts, authentication flows, cross-layer problem solving, full-stack application understanding

Leadership & Collaboration

Technical mentoring, architectural code reviews, cross-functional collaboration, stakeholder communication, project ownership, requirements translation, team enablement

Architecture & Performance

Application architecture, frontend system design, scalable UI patterns, Web Workers, WebAssembly (CPP → WASM), IndexedDB / Dexie DB, performance profiling, large-dataset rendering, maintainable codebases

AI & Intelligent Systems (Applied)

AI-powered API integration, AI-assisted application features, intelligent dashboards, pattern visualization, decision-support interfaces, human-in-the-loop design, AI-assisted development workflows

Process, Tooling & Standards

Internal frameworks, application scaffolding, project generation tooling, SOP authoring, architectural standards, technical documentation

EDUCATION

Cogniz Info Tech

Android Developer Intern (June - Dec 2017)

Matha College of Technology

Bachelor of Technology in Computer Science (2014-2018)

St. Paul's International

Higher Secondary in Computer Science (2008-2014)

INTERNSHIPS

Cogniz Info Tech

Android Developer

ISmart Solutions

Android Developer

Technovalley Software

Internship Certificate

ISmart Solutions

Java Developer

HIGHLIGHTED PROJECTS

Scout Insights – Enterprise Intelligence Platform

Angular (17–19), TypeScript, ArcGIS JS API, Tailwind CSS, PrimeNG, REST APIs, Web Workers, WebAssembly (CPP→WASM), IndexedDB/Dexie DB, Highcharts, frontend middleware architecture

- Led frontend architecture for the merging of two large enterprise applications (each with 7 major modules) into a single unified platform
- Built a map-centric intelligence system enabling users to:
- Draw custom shapes on the map to dynamically filter data
- Visualize buildings within configurable range circles of other buildings
- Designed and optimized UI workflows to handle ~48 lakh (4.8 million) records efficiently
- Implemented high-performance clustering and re-clustering logic, leveraging assembly-level / low-level computation pipelines for scalability
- Integrated parcel-level land data linked to individual buildings for detailed analysis
- Developed extensive multi-dimensional filtering across location, property attributes, scores, and relationships
- Architected frontend middleware to standardize backend API interaction and manage heavy data flow
- Focused on performance, memory optimization, and smooth user experience under extreme data load

Kiorra – Employee Engagement & Recognition Platform

Angular, TypeScript, Tailwind CSS, PrimeNG, REST APIs, role-based access control, analytics dashboards

- Built a comprehensive employee recognition and engagement platform supporting rewards, mood tracking, and social interactions
- Implemented gift card–based rewards and ecommerce-style redemption workflows
- Designed social feed–style interactions to encourage peer recognition and engagement
- Developed admin dashboards enabling individual, department, and company-wide analytics
- Focused on scalable UI design, data visualization, and role-based access
- Ensured secure handling of user data and administrative controls

Blueprint – Visual Workflow & Interaction Platform

Angular (17–19), TypeScript, ArcGIS JS API, Tailwind CSS, PrimeNG, REST APIs, Web Workers, WebAssembly (CPP→WASM), IndexedDB/Dexie DB, Highcharts, frontend middleware architecture

- Led frontend architecture for the merging of two large enterprise applications (each with 7 major modules) into a single unified platform
 - Built a map-centric intelligence system enabling users to:
 - Draw custom shapes on the map to dynamically filter data
 - Visualize buildings within configurable range circles of other buildings
 - Designed and optimized UI workflows to handle ~48 lakh (4.8 million) records efficiently
 - Implemented high-performance clustering and re-clustering logic, leveraging assembly-level / low-level computation pipelines for scalability
 - Integrated parcel-level land data linked to individual buildings for detailed analysis
 - Developed extensive multi-dimensional filtering across location, property attributes, scores, and relationships
 - Architected frontend middleware to standardize backend API interaction and manage heavy data flow
 - Focused on performance, memory optimization, and smooth user experience under extreme data load
