

UMER FAROOK

Senior Frontend Engineer

+91 9895967877 | umerfarook7877@gmail.com | [linkedin.com/in/umer7877](https://www.linkedin.com/in/umer7877) | Kochi, India

SUMMARY

Senior Frontend Engineer with **10+ years** of experience building compliance-grade, high-performance enterprise SaaS platforms using **React, Next.js, Node.js and TypeScript**. Specialist in **performance engineering**, micro-frontend architecture, and scalable component systems, with deep experience in regulated EU environments (security, audit, and compliance). Led large-scale migrations, designed **REST/GraphQL** contracts, and delivered 50–60% performance improvements across critical workflows.

SKILLS & TECHNICAL STACK

Frontend Core:

React.js, Next.js, Web Components, Angular, Webpack, JavaScript (ES6), TypeScript, Tailwind, HTML5, CSS3, SCSS

Backend : Express.js, Node.js, GraphQL, NoSQL (MongoDB), REST API Architecture, Next.js API Router.

Data Fetching & State: Redux Toolkit, Zustand, TanStack Query (React Query)

Unit Testing: Jest

Tools/DevOps: Git, Webpack, Vite, npm, CI/CD Pipelines, Docker, Figma, Postman

Design Patterns: Microservice Architecture, Frontend Design Patterns (Container-Presenter, Render props, Compound Components, Custom Hooks, HOC), SSR, Component Architecture & Reusability, Performance Optimisation, Web Accessibility, Cross-Browser Compatibility.

Cloud & Frontend Infrastructure (Working Knowledge): AWS S3, AWS API Gateway, Authentication, AWS Amplify (Frontend CI/CD & Hosting)

PROFESSIONAL EXPERIENCE

EQS Group — Sr. Front-End Developer | 03 March 2017 – **Present**

- Developed scalable, high-performance **React modules** using clean **component architecture**, reusable **design patterns**, and **redux state management**. Adopted advanced **component patterns** (HOCs, **Render Props**, **custom hooks**) to maximize **modularity**.
- Led and mentored a 3–4 member front-end team, driving architecture, performance engineering, and web accessibility standards for a regulated enterprise SaaS platform.
- Migrated legacy systems into a **Web Component + React hybrid architecture**, reducing technical debt and improving load/runtime performance.
- Architected **REST and GraphQL** data layers (REST for consumption, GraphQL for predictable caching and reduced over-fetching).
- Improved rendering performance by 60% with **weighted memoization strategies** (including **React compiler**, fine-grained **memo boundaries**, and selective **re-render control**) and reduced **bundle weight** via **React.lazy** and **code splitting**.
- Collaborated closely with designers, backend teams, and **product groups** to deliver intuitive **UX** while ensuring **web accessibility** and **cross-browser stability**.
- Enhanced frontend **CI/CD workflows** and deployment pipelines, working with cloud-hosted environments (**AWS-based**) to ensure reliable builds, environment-specific configuration, and stable production releases..

RapidValue Solutions — Front-End Developer | 05 January 2015 – 28 December 2016

- Delivered responsive interfaces using **Vanilla JavaScript** with jQuery implementation
- Enhanced UX through structured DOM scripting and dynamic interaction handling

WebCastle Media Private Limited — UI/UX Designer - Developer | 10 September 2013 - 12 December 2014

- Designed and built responsive client websites, owning UX/UI design and front-end development using HTML, CSS, and JavaScript.

PRODUCT & PROJECT ENGINEERING EXPERIENCE

Enterprise Complaints & Case Management Platform (SaaS)

Front-End Performance Engineer | React, Redux, TypeScript

- Led performance engineering for a large-scale enterprise complaints and case management product serving **5,000+ internal users per screen/workflow** across compliance-critical EU applications.
- Designed and implemented an end-to-end **Performance Improvement Program**, including **code-splitting, route-level lazy loading, bundle optimization** reducing initial load time and runtime memory footprint significantly.
- Re-architected rendering flow using **memoization, selective re-rendering, and state normalization**, eliminating major performance bottlenecks in complex workflows.
- Achieved **50–60% overall performance improvement** across critical user journeys, directly improving analyst productivity and system responsiveness in regulated environments.
- Worked closely with security and compliance teams to ensure performance optimizations aligned with **strict EU security, audit, and compliance requirements**.

Enterprise Approvals & Workflow Orchestration Platform (SaaS)

Front-End Architect | React, Node.js, REST, GraphQL, TypeScript

- Built the **front-end architecture** for a compliance-grade approvals platform handling complex approval hierarchies and audit flows.
- Worked closely with back-end engineers on the **Node.js API design**, contributing to **REST and GraphQL contracts, middleware strategy, and security requirements** (auth, RBAC, rate limiting, validation, Helmet, CORS).
- Defined **API standards** (pagination, filtering, query limits, error models) to keep the UI fast and predictable at scale.
- Implemented **data-heavy UI patterns** (virtualized tables, optimistic updates, cache normalization) for high-volume approval workflows.

WebReports and Investor Relations websites (Client Projects)

Vanilla JavaScript, jQuery, HTML5, and CSS3

- Built **multi-page production websites** using **vanilla JavaScript, jQuery, HTML5, and CSS3**. Implemented **high-performance animations and parallax interactions**, optimized for smooth rendering and cross-device consistency.
- Delivered **pixel-perfect, responsive layouts** using mobile-first CSS, Flexbox/Grid, and custom media queries from Figma/PSD designs.
- Optimized **front-end performance and SEO**: reduced render-blocking assets, lazy loading, semantic HTML, and accessibility best practices.

EDUCATION

B.Tech in Computer Engineering | Govt. Engineering College Idukki, Mahatma Gandhi University (2009 – 2013)
