Academic Project: Smart Irrigation System Using IoT in Polyhouse Cultivation

Successfully developed and implemented an automated overhead sprinkler irrigation system using IoT in a controlled polyhouse environment. Utilized ESP32 microcontroller, soil moisture sensors, DHT11 sensors, and the Blynk app to enable real-time monitoring and remote control of irrigation based on soil and climatic conditions. The system optimized water usage, reduced manual intervention, and prevented over- and under-irrigation, demonstrating efficiency, scalability, and practical value for sustainable agriculture.
