SANJU NARAYAN

PROFESSIONAL SUMMARY

Independent and self-motivated Cloud Technology graduate with hands-on project experience and strong technical skills, seeking to grow under an experienced team and contribute effectively. Enthusiastic and detail-oriented with foundational knowledge in leading cloud platforms including AWS, Microsoft Azure, and Google Cloud Platform. Proficient in virtualization, basic networking, and cloud security principles. Eager to apply my skills in a dynamic environment while continuously learning and evolving within the field of cloud computing.

WORK HISTORY

Student Intern, Jain University

07/2021 – Present

- Cloud Technology and Information Security Student
- Proficient in operating systems, object- oriented programming (Java), web development (HTML), database management (SQL), programming (Python) and Cloud computing (Platforms such as AWS, Microsoft Azure, IBM Cloud, and Oracle Cloud.

PROJECTS

- **Pawbook-** An app for pet owners, Implemented the front-end design for "Pawbook", a pet owner application, leveraging core web technologies including HTML and CSS.
- **Digital Library:** Created a digital library platform, leveraging HTML and CSS for user interface design.

- **Multi-Model Online E-Voting System (FINAL SEM PRJCT):**
Role Front End Developer, technologies used HTML & CSS

This project delves into the integration of multimodel authentication methods as a solution to enhance the security, accuracy, and reliability of online voting systems. Traditional online voting systems often rely on a single mode of verification, such as passwords or PINs, which can be susceptible to breaches or fraud. To mitigate these vulnerabilities, this research proposes a comprehensive multimodel authentication framework that combines multiple biometric techniques, including fingerprint recognition, facial recognition, and voice authentication—with non-biometric verification elements such as secure document checks and two-factor authentication (2FA).

PERSONAL DETAILS

Date of Birth / Age:
28/05/2003 / 22

Marital Status: Bachelor

Gender: Male

INTERESTS

- Football
- Swimming
- Reading Books
- Working out
- Art & fashion

Multimodel e-voting systems incorporate multiple methods of identity verification, enhancing both security and accessibility. Such systems may use a combination of biometrics—like fingerprint scanning, facial recognition, and voice recognition—to authenticate voters. By employing various authentication methods, multimodel systems aim to reduce the likelihood of fraudulent access while providing a secure, user-friendly experience. Research suggests that multimodel systems are especially beneficial in preventing voter impersonation and maintaining voter anonymity.

CERTIFICATIONS

- YBI Foundation Course in Data Science and ML
 - YBI Foundation Course in Data Analytics and Business
 - YBI PYTHON certification course
-

SPECIALIZATION

- DSA
 - Java OOP
 - Python
 - AWS
 - HTML
