Objective

- Learn, Grow, and Innovate

About

I have 9+ years of experience, during which I have worked on various business domains and with multiple technologies such as Laravel, NodeJS, Angular, and React. I have contributed to all stages of project life cycles, from requirement gathering, estimation, client communication, and development, to collaborating with front-end teams, ensuring quality assurance, and production deployments. For the last 4 years, I've been working in a way that I handle my project team, including QA, frontend, and junior backend developers.

Projects/Business Domains

- **Marketplace/E-commerce**
 - Has extensive knowledge of and experience with a variety of e-commerce platforms, such as buyer/seller portals, ticket booking sites, multi-vendor grocery stores, etc.
- **Enterprise solutions/Inventory solutions**
 - I worked on a number of enterprise systems, such as POS system, internal task management systems, offline invoicing transaction monitoring system, etc., to keep track of daily operations for numerous businesses.
- **Data directory/Data warehouse**
 - Worked on websites where users may search for and keep information about products, properties, and their ratings, as well as users, artists, and other information like staff attendance. also employing visual elements to transform raw data into statistically significant results.
- **Logistics and transportation**
 - Has worked on SaSS based product where any courier provider register and keep track of their parcels, operations, invoices, customer

receipt etc. Also worked on project where customer can place order of items which they want to get delivered to one place to another.

- **edTech**

- Has some familiarity with educational technology sites where teachers can write blog, publish articles, and leave helpful notes for their students.
