Profile

Experienced PHP Developer with over 4.8+ years experience building Dynamic web applications. proficient in collaborating with cross-functional teams to deliver high quality, scalable and maintainable solutions. Adept at utilizing php frameworks , front-end technologies, and database to create intuitive user experiences and debugging along with optimizing applications.

Education

MCA(Master of Computer Applications, Odisha) passed out in the year of 2021
United School of Business Management, Bhubaneswar

BCA(Bachelor of Computer Application, Odisha) passed out in the year of 2019
S.V.M COLLEGE (AUTONOMOUS), Jagatsinghpur

Higher Secondary Examination 12th, Odisha - Passed the Annual Exam - 2016
BAISI MOUZA JR COLLEGE, PURAN, Jagatsinghpur

BSE(Board of Secondary Education, Odisha) 10th Examination held in the month of FEBRUARY - 2014
MARICHPUR HIGH SCHOOL, BARAMUNDALI, Jagatsinghpur

Employment

Sr. Software Engineer **Sep 2021 - Present**
at CSM Technologies ,Software company in, Bhubaneswar, Odisha, India

- Producing detailed specifications and writing the program codes, adhering to coding standards
- Testing and debugging the product in controlled, real situations.
- Proper understanding of project and project flow.
- Tests the unit and logs the problems, till the unit is tested OK.
- Submits the code, the test pack and the test results for review.
- Incorporates review comments in the unit code and test pack.
- Review test results and fix technical problems (known as bugs)

1. Project:-

In-house company official website (<https://www.csm.tech/>)

Worked on Industry agriculture offering and developing publications."

- In my current role, I successfully upgraded our project from PHP 7.4.2 to PHP 8 and from Laravel 5.4 to Laravel 9."

This highlights both the achievement and the specific versions involved in the upgrade.

- Implemented performance optimizations to improve website load times. Integrated third-party APIs or services. Streamlined codebase by refactoring existing code or establishing best practices.
- Collaborated with design teams to ensure visual consistency.

- "Optimized website database queries, resulting in a 20% improvement in page load speed."
- "Implemented a custom content management system (CMS) to allow non-technical users to easily update website content."
- "Designed and implemented a dynamic product search feature with advanced filtering options."

2.Project:-

Odisha Government Election :-

- Technologies Used: Core PHP, MySQL (Stored Procedures), JavaScript
- Description: Developed a comprehensive application for managing election-related data for the Odisha government.
- This application included multiple modules: Office Bearers Module: Managed information on key personnel, including State Office Bearers, Convenors of Party Frontal Organizations, District Presidents, and Media Cell.
- Press Releases: Enabled streamlined management and dissemination of official press releases.
- Citizen Welfare Module: Focused on tracking and promoting initiatives aimed at public welfare. Achievements: Improved data organization and accessibility for the government, facilitating better communication and decision-making across different offices.

3.Project

Chattisgarh Industrial waste disposal system

<https://iwmmms.cgstate.gov.in/>

Technologies Used: Lumen, Angular

Description: Developed a comprehensive mobile application development management platform designed to streamline industry registration, NOC (No Objection Certificate) application, officer approval processes, and waste disposal management. The system offers multiple modules to facilitate efficient operations at each stage.

Key Features:

1. **Industry Registration:** A user-friendly registration process for industries to enter necessary details and initiate their profile setup.
2. **NOC Application:** After industry registration, the platform enables users to apply for a No Objection Certificate (NOC). The application process integrates with multiple third-party APIs for document verification, compliance checks, and real-time processing.
3. **Officer Approval Workflow:** Industry applications for NOC are routed to relevant officers for approval. The application uses role-based access and notification systems to keep officers informed and ensure timely action.
4. **Waste Disposal Management:** Once the NOC is approved, industries can request waste disposal services. The system tracks the amount of waste, providing industries with real-time data on how much waste can be disposed of, based on set regulations and approvals.
5. **Real-time Data Integration:** Utilizes third-party APIs for real-time data on waste disposal limits, environmental guidelines, and regulatory updates. External systems are also used for verifying industry certifications and validating compliance.
6. **Reports & Analytics:** Integrated analytics engine, powered by APIs, to

generate detailed reports on waste disposal activities, industry participation, and overall environmental compliance.

7. **Notifications & Alerts:** The platform sends automated alerts to users at every step of the process—whether it's a successful NOC application, officer approval, or waste disposal updates. Notifications are powered by an external messaging API for SMS, email, or in-app notifications.
8. **Data Security & Authentication:** Ensures secure access to the application by implementing robust authentication systems, including OAuth, and uses encryption for data storage and transmission. Secure APIs handle sensitive user and industry data.

By using **Lumen** for backend development, the application benefits from a fast, lightweight framework for handling API calls and real-time processing, while **Angular** provides a dynamic, responsive front-end for managing the user interface and interactions effectively.
