- Collaborate with product managers and designers to identify user requirements and translate them into technical solutions.
- Develop and maintain REST APIs.
- Test functionality of software applications through unit and integration testing
- Timely response to emails, voicemails and written correspondence.

PROJECTS

Project #1

Name of the Project : Highrich

URL : <https://www.highrich.in/>

Description

Highrich is an eCommerce website built using Spring Boot and React Js. It features thousands of products and its own stock centers, with payment options such as Shopping wallet, Cash on delivery, and a payment gateway via razor pay

Project #2

Name of the Project : Klamy

URL : <https://klamy.in/>

Description

Klamy is an advanced cosmetic product shopping platform that includes a face testing module with image analysis. It detects skin issues and suggests appropriate products. The system also sends personalized reports and product recommendations via email and WhatsApp. Additionally, the platform offers a secure payment gateway and an event ticket booking module tailored for beauty parlors and cosmetic professionals.

Project #3

Name of the Project : Mydealforever

URL : <https://www.mydealforever.com>

Description

Mydealforever is a fully-developed eCommerce MLM web application built with the CodeIgniter framework. It consists of three main modules, including a shopping cart module for the client-side front area, a member dashboard with reports and user genealogy, and an admin area. Additionally, the application includes Paytm integration.
