EXPERIENCE

CodeVyasa

Dec 2025 – Present

Software Engineer II

Noida, India

- Developed a fraud detection module to identify fake/whitelisted companies, improving platform trust and integrity
- Optimized Background Verification (BGV) workflows for enterprise clients like Wipro, Infosys, and HCL.
- Built and maintained scalable backend using **Laravel and REST APIs**, handling high-volume data processing
- Reduced false positives by refining validation logic and implementing rule-based filtering mechanisms

Biz2Credit

Oct 2024 – Nov 2025

Software Engineer

Noida, India

- Developed and delivered **3+ fintech modules** in a high-scale lending platform, ensuring performance and reliability
- Integrated multiple third-party APIs and designed resilient error-handling mechanisms for seamless data exchange
- Improved backend performance of critical modules by **30%** through query optimization and efficient indexing
- Reduced API latency by implementing caching strategies and optimizing database interactions

Unnati

Dec 2022 – Oct 2024

Software Engineer

Noida, India

- Integrated services including WhatsApp APIs, GST, PAN, and E-Way Bill systems for real-time data processing
- Refactored legacy PHP codebase into modular **OOP architecture**, improving scalability and maintainability
- Developed backend-driven workflows that automated operations and reduced manual effort significantly
- Collaborated with frontend teams to deliver responsive and efficient user interfaces using Bootstrap

SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, C/C++, SQL, CakePHP, CodeIgniter, OpenCart

Backend & Databases: REST APIs, MVC Architecture, MySQL, MongoDB, Query Optimization, Caching

Concepts & Tools: OOP, Data Structures, Algorithms, System Design, Git, Postman, Agile/Scrum

PROJECTS

ORA Finance (Loan Management System)

- * Architected a full-stack loan management platform handling application lifecycle, approvals, disbursement, and repayments
- * Designed modular backend services, reducing codebase size by **20%** and improving maintainability
- * Implemented secure and scalable REST APIs to handle financial workflows and user transactions
- * **Tech Stack:** Laravel, MySQL, JavaScript, AJAX, Bootstrap

Unnati ERP (Agritech System)

- * Built supplier, store, and customer modules with transaction tracking and audit logging
- * Improved user engagement by **25%** through coupon systems and promotional features
- * Designed backend workflows to ensure data consistency across modules
- * **Tech Stack:** OpenCart, PHP, MySQL, REST APIs, AJAX

EDUCATION and ACHIEVEMENTS

Jaypee Institute of Information Technology

2017 – 2021

B.Tech

Noida, India

- * **LeetCode:** Solved 500+ problems (DSA, SQL) | Strong problem-solving skills
- * **CodeChef:** Participated in 20+ competitive programming contests
- * **Certifications:** Advanced SQL Certification and Generative AI certification from Udemy
