Profile

Senior Software Engineer with a Bachelor of Technology in Computer Science & Engineering, specializing in Laravel development. Expertise in PHP, PostgreSQL, HTML, CSS, jQuery, and JavaScript, with a focus on the Laravel framework. Proven track record in designing and implementing scalable web applications while adhering to best coding practices.

Skills

- PHP and REST APIs
- Version control with Git
- Database management with SQL
- Data interchange using JSON
- MVC framework expertise
- Web development with HTML and CSS
- JavaScript and jQuery proficiency
- Code review and quality assurance
- Unit testing methodologies
- Laravel framework experience
- PostgreSQL database skills
- Payment gateway integration
- Technical support
- Software applications
- Testing and debugging
- POS device integration

Experience

Grandis Business Solutions | Thrissur

Senior Software Engineer

01/2023 - Current

- Contributed to the development of the hospital management system at Grandis Business Solutions since January 2023.
- Engaged in multiple projects, including human resource management, and queue management systems.
- Collaborated with cross-functional teams to enhance software performance and reliability.
- Utilized agile methodologies to deliver high-quality software solutions efficiently.
- Integrated third-party APIs into existing systems.
- Optimized databases to improve query performance.
- Helped junior developers with debugging code, and technical support.
- Integrated Pine Labs POS device for transactions.

TiaTech Health Technologies | Thrissur

Senior Software Engineer

11/2018 - 01/2023

- Engineered hospital management system solutions at TiaTech Health Technologies from November 2018 to January 2023.
- Collaborated with HL7 standards to facilitate medical information exchange.
- Integrated payment gateways, including Razorpay and PayPal, for seamless transactions.
- Implemented new features into existing software solutions.
- Integrated third-party APIs into existing systems.

Education

Axis College of Engineering & Technology | Calicut University

Bachelor of Technology in Computer Science & Engineering

05/2018

Projects

Hospital Management System

- Designed and deployed essential healthcare modules, including electronic medical records (EMR), front office management, nursing station operations, and teleconsultation services
- Our online portal provides patients with the ability to register and schedule appointments with doctors
- Successfully engineered robust APIs, improving user interaction and accessibility across mobile and kiosk platforms
- Integrated external APIs to expand system functionality

Human Resource Management System

- Designed and implemented key HRMS modules such as attendance tracking, leave management, shift scheduling, employee records, and payroll processing
- Built user-friendly mobile APIs that simplified HR tasks, leading to increased employee engagement and productivity

TiaTele

- It is a comprehensive, HIPAA, NABH, and GDPR compliant telehealth platform that provides telemedicine software and hardware devices enabling healthcare providers to
- Securely connect with patients from a remote location in real time
- Examine the patient's physical condition and measure their vitals
- Access patient health records through an integrated EHR
- Prescribe treatment via e-prescription tools

Roles and Responsibilities

- Requirement analysis and stakeholder management: served as the primary point of contact, effectively gathering requirements, and ensuring stakeholder alignment
- Technical documentation: prepared comprehensive technical documentation to support project development and implementation
- Quality assurance: developed detailed test case documents, ensuring thorough testing and rigorous quality control
- Hypercare support: ensured a smooth transition by providing timely and effective post-deployment support
