Full Stack Software Engineer with a proven track record of delivering scalable SaaS applications in high-availability production environments. Skilled in Java, PHP, React, REST APIs, and AWS-based microservices, with hands-on experience in Docker, Kubernetes, CI/CD pipelines, and on-call production support. Adept at building maintainable systems that balance performance, reliability, and user experience.

Willing to relocate to: Kochi, Kerala - Bengaluru, Karnataka - Chennai, Tamil Nadu

Work Experience

Associate Software Developer

PowerSchool Group-Bengaluru, Karnataka

Full-time

July 2023 to December 2025 • Full-time

- Delivered scalable, high-impact features for the Schoology LMS by developing and maintaining modular components using React, Laravel, TypeScript, JavaScript, jQuery, PHP, Java, and SQL, while leveraging AI-assisted tools (Cursor, GitHub Copilot) to accelerate development and improve code quality.
- Designed and implemented end-to-end front-end and back-end functionality, supported by unit and integration testing, ensuring stable, maintainable, and production-ready releases.
- Led and contributed to localization initiatives, including Arabic language support, and enhanced elementary assessment workflows, significantly improving usability and learning outcomes.
- Integrated internal platforms such as USM (Common Standards) and Chalk with Schoology, enabling standards-aligned lesson planning and seamless cross-product interoperability.
- Proactively monitored application health and performance using Sumo Logic, New Relic, and Watchdog, performing root-cause analysis to resolve assessment-related production issues.
- Participated in PagerDuty on-call rotations, responding to high-priority incidents, reducing downtime, and contributing to improved system reliability and uptime.
- Maintained consistent development and deployment environments using Docker and Kubernetes, and utilized Ngrok for secure local service exposure and debugging during development and integration testing.
- Optimized Amazon Redshift infrastructure by analyzing workload patterns and migrating the cluster from ra3.xlplus to dc2.large, resulting in cost reduction and improved query efficiency.

Education

Software Engineering (M.Tech)

VIT University

Full-time | July 2018 to April 2023

Scored: 8.1 CGPA

Skills / IT Skills

- Version control systems

- APIs
- Full-stack development
- Docker
- Redux
- DevOps
- Back-end development
- Integration testing
- NoSQL
- Relational databases
- Product development
- Node.js
- Git
- TypeScript
- Database management
- Web servers
- Authentication
