

MOHAMMAD IMRAN

SENIOR FULL-STACK DEVELOPER (PHP, LARAVEL & PYTHON FASTAPI)

Phone: +91 8977766683 | Email: mohammadimran777666@gmail.com | Location: Hyderabad, India
GitHub & Portfolio: available upon request

PROFESSIONAL SUMMARY

Result-oriented Senior Full-Stack Developer with nearly 6 years of robust IT experience architecting, developing, and scaling dynamic enterprise web applications. Proficient in PHP 7/8, Laravel, and Python FastAPI frameworks. Expertise includes building high-throughput RESTful APIs, modernizing legacy infrastructure, executing third-party ecosystem integrations, and designing automated event-driven systems (cron jobs). Adept at working cross-functionally to deliver secure, performance-optimized software solutions aligned with complex business needs.

TECHNICAL EXPERTISE

Backend Architecture:	PHP 7.x/8.x, Laravel (8/9/10+), Python FastAPI, Node.js
Automations & Tasks:	Asynchronous Task Processing, Cron Jobs, Event Scheduling, Background Workers
Frontend Technologies:	JavaScript (ES6+), React Native, ReactJS, jQuery, HTML5, CSS3, Bootstrap
APIs & Ecosystems:	RESTful API Design, Amazon Marketplace APIs, Klaviyo, Payment Gateways (Stripe, PayPal, Klarna, Checkout.com)
Databases & Tools:	PostgreSQL, MySQL, Database Normalization, Version Control (Git/GitHub), Linux, XAMPP

PROFESSIONAL EXPERIENCE

Software Developer | *ComfortClick Softech Pvt Ltd.* Sep 2024 – Present

Project: ComfortClick Core Enterprise ERP [PHP Laravel, Python FastAPI, PostgreSQL, Amazon APIs, Klaviyo]

- Python FastAPI & Automations:** Architected Python FastAPI applications using structured DTO implementations and background workers for high-volume operational automation.
- Cron Job Infrastructure:** Engineered robust asynchronous Cron Jobs to execute automated background tasks, periodic financial operations, and database cleansing schedules.
- Enterprise API Integrations:** Integrated Amazon Marketplace and Klaviyo RESTful APIs to ingest profile metrics and operational parameters into normalized PostgreSQL tables.
- Expense Management:** Designed an automated multi-step expense approval workflow engine routing real-time validation actions straight to team leaders with full administrative tracking.
- Global Logistics:** Built interactive cross-border dashboard tracking units supporting inventory stock transfers seamlessly across UK, France, Italy, Germany, and Ireland.

PHP Laravel Developer | *Dikazo Solutions Pvt Ltd.*

Aug 2023 – Aug 2024

Project: Dikazo E-Commerce Engine & Retail Ecosystem *[PHP Laravel, Node.js, Payment Gateways, MySQL, Git]*

- **Backend Performance:** Refactored structural legacy source code into modern Laravel architectures, instantly realizing a 30% optimization leap in page runtimes and database query flows.
- **Ecosystem Integrations:** Integrated third-party logistics tracking and secure payment gateway layers (Stripe, PayPal, Klarna, Checkout.com) to significantly reduce user checkout friction by 20%.
- **Mobile Optimization:** Engineered responsive, device-agnostic presentation tiers that directly caused a 25% upward surge in mobile device transaction pipelines.

Project: Hourlyfresh (Grocery Marketplace Platform) *[PHP Laravel, Node.js, Ajax, Bootstrap, MySQL]*

- **Role Architecture:** Developed a multi-role web ecosystem with unique operational interfaces for Administrators, Customers, Delivery Logistics Agents, and Inventory Managers.
- **Operational Controls:** Implemented CRUD panels for stock control alongside real-time delivery status updates (picked up, in transit, delivered) and marketing content management maps.

PHP Laravel Developer | *Selinis Software Pvt Ltd.*

Sep 2020 – Aug 2023

Project: Traffic Intelligent System *[PHP, LeafletJS, Bootstrap, JavaScript, HTML5/CSS3]*

- **Geospatial Development:** Engineered live geolocated mapping modules using LeafletJS to accurately stream journey pattern paths, coordinate beat duty arrays, and oversee personnel additions.
- **Interface Protection:** Constructed robust client-side validation suites to ensure structural security across high-traffic, dynamically rendered public-facing layouts.

Project: DOLO 650 Scan & Rewards Portal *[PHP 7, Bootstrap, Vanilla JavaScript, Media Queries]*

- **Automation Engines:** Designed an interactive scanning system where users capture QR codes to calculate loyalty points and execute rules-based automated redemptions.
- **UI/UX Engineering:** Authored pixel-perfect, highly responsive layout wireframes that ensured full display compliance across major desktop and mobile browser configurations.

Project: RBUDDY Pharmaceutical Platform (Wockhardt) *[PHP, JavaScript, Ajax, Bootstrap Grid Layout]*

- **Dynamic Optimization:** Managed frontend-to-backend communication bridges using Ajax to handle continuous pharmaceutical supply chain product calculations without UI latency.
- **Platform Security:** Maintained and fixed backend production bugs to uphold high application uptime for a global pharmaceutical platform providing affordable medicines.

Project: Jobeter Freelance Ecosystem *[PHP, Interactive Chat Engines, Payment Gateways, Custom Scripting]*

- **Modular Engineering:** Constructed over 40 functional, modular backend components including direct one-to-one messaging tabs, group chats, and instant withdrawal triggers.
- **Automation Logic:** Written custom algorithms handling rules-based self-governing orders, automatically processing instant order cancellations and absolute financial refunds if developers missed deadlines.

EDUCATION

Bachelor of Computer Applications (BCA)

Acharya Nagarjuna University, Guntur, AP
