PROFESSIONAL SUMMARY

Senior Backend Developer with 7+ years of experience in PHP (Laravel/Lumen) and Python, specializing in scalable API development, backend system design, and database optimization. Experienced in SaaS-based application development, payment integrations, and performance optimization for high-traffic platforms. Proficient in MongoDB, MySQL, Linux environments, and RESTful API development. Strong problem-solving skills with hands-on experience in production support and system performance improvement.

EXPERIENCE

Playspots - Senior Back-End Developer

Calicut

01/2020 - 03/2026

- Owned and enhanced core financial systems including settlements, payouts, and revenue tracking.
- Improved backend performance through advanced query optimization and indexing strategies.
- Streamlined financial reporting workflows to support business decision-making.
- Strengthened system reliability by proactively identifying and resolving performance bottlenecks.

Softfruit Solutions - Web Developer

Calicut

10/2017 - 01/2020

- Delivered multiple end-to-end web solutions using PHP (Laravel/Lumen) and Python frameworks.
- Improved application performance through query optimization and efficient backend logic implementation.
- Handled full project lifecycle including requirement analysis, development, testing, deployment, and maintenance.
- Provided technical support and continuous enhancements for live production systems.

PROJECTS

Sports Venue Booking & Management System

Technologies: PHP (Laravel, Lumen), MongoDB, REST APIs, React.js,

SKILLS

PHP
Laravel
Lumen
Python
RESTful API Design
Third-Party API Integration
Payment Gateway Integration
Push Notification (FCM) Integration
MySQL
MongoDB
JavaScript
React Js
jQuery
HTML5
CSS3
Bootstrap

EDUCATION

06/2015

MES MAMPAD COLLEGE

Mampad, Kerala

Bachelor of Computer

Applications: Computer Applications Development

PERSONAL DETAILS

Date of Birth: 06/09/1993

Nationality: Indian

Marital Status: Single

HTML, CSS,
Bootstrap, Linux

Project Description:

A **scalable Pan-India sports venue booking platform** that enables users to discover sports venues, book time slots, make secure online payments, and manage bookings through web and mobile applications

Key Contributions:

- Designed and developed secure RESTful APIs for booking, cancellation, and payment workflows.
- Implemented complex business logic including commission calculation, settlement processing, and GST handling.
- Built and maintained admin modules for venue management, financial reporting, and revenue tracking.
- Optimized MongoDB queries and aggregation pipelines to improve system performance.
- Integrated payment gateways and push notification services for real-time updates.
- Troubleshoot and resolved production issues to ensure high system reliability.
- Collaborated with frontend teams (React.js) for seamless API integration.
- Managed deployment and monitoring in Linux server environments.

Salon Management & Booking System

Technologies: Python (Django), MySQL, REST APIs, HTML, Linux

Project Description:

A web-based salon booking and management system designed to streamline appointment scheduling, service management, customer tracking, and billing operations.

Key Contributions:

- Developed backend modules using Django for appointment booking, staff scheduling, and service management.
- Designed and implemented RESTful APIs to support booking and customer workflows.
- Created and maintained MySQL database schemas for customers, appointments, payments, and service records.
- Implemented business logic for time-slot validation, booking rules, and billing calculations.
- Optimized database queries to improve appointment processing performance.
- Deployed and maintained the application in a Linux server environment.
- Provided ongoing maintenance, debugging, and feature enhancements.

Match Prediction Application

Technologies: PHP (Laravel), MongoDB, REST APIs, React.js, HTML, CSS, Bootstrap

Project Description:

A web-based football prediction platform used by **300,000+ users**, enabling participants to predict match outcomes for tournaments such as the **FIFA World Cup** and regional leagues like the **Super League Kerala**. The system manages predictions, automated scoring logic, user rankings, and real-time leaderboard generation.

Key Contributions:

- Developed RESTful APIs using Laravel to manage match fixtures, user predictions, and scoring systems.
- Designed MongoDB data models for match results, prediction entries, and leaderboard management.
- Implemented automated point calculation logic based on match outcomes.
- Built authentication and user management modules.
- Integrated backend APIs with React.js frontend for dynamic leaderboard updates.
- Optimized MongoDB aggregation pipelines for ranking and statistical reporting.
- Managed deployment and maintenance in Linux environments.

Ejarathi – Property Management System

Technologies: PHP (Laravel), MySQL, REST APIs, HTML, jQuery, CSS, Bootstrap, Linux

Project Description:

A **SaaS-based property management platform** designed to manage property listings, lease agreements, rental tracking, and administrative workflows. The system supports multiple user roles, including landlords, lessors, and staff, with secure **role-based access control (RBAC)**.

Key Contributions:

- Developed backend modules using Laravel for property, tenant, and lease lifecycle management.
- Implemented role-based authentication and authorization for different user types.
- Designed and maintained normalized MySQL schemas for properties, contracts, payments, and reports.
- Built RESTful APIs supporting dashboard views and user workflows.
- Optimized complex MySQL queries and indexing strategies to enhance performance.
- Managed deployment and production support in Linux environments.

Rewards Management System – Kabayan Group

Technologies: PHP (Laravel), Vue.js, MySQL, REST APIs

Project Description:

A customer loyalty and reward points management system designed to track purchases, calculate reward points, and manage redemption workflows across multiple hypermarket outlets.

Key Contributions:

- Developed backend modules using Laravel for reward accumulation and redemption logic.
- Designed RESTful APIs for transaction processing and real-time reward updates.
- Created optimized MySQL schemas for transaction records and customer data.
- Integrated Vue.js frontend with backend APIs for dashboards and reporting.
- Provided maintenance, performance tuning, and production support.

Delivered multiple service and product-based web applications, implementing scalable backend architectures, RESTful APIs, database schema design (MySQL/MongoDB), and performance optimizations.
