## Experience

---

**Associate Product Team Lead**, Ecaret Solutions - Kannur, Kerala Dec 2019 - Present

- Partnered with the Product Team Lead to analyze product performance metrics, leading to a 40% reduction in user-reported issues within 3 months by implementing key improvements.
- Executed comprehensive code reviews focusing on best practices, scalability, and maintainability; identified 15 critical improvement areas that collectively enhanced overall code.
- Collaborated with AWS consultants to optimize cloud infrastructure, improving performance, scalability, and security for business-critical applications.

**Junior Software Developer**, Infinite Open Source Solutions - Calicut, Kerala Feb 2018 - Aug 2019

- Developed and maintained MLM systems and e-commerce platforms, implementing payment gateway integrations and third-party API integrations to enhance functionality.
- Engaged with senior developers to manage large-scale, high-complexity projects for corporate clients.

## Education

---

**CUSAT, College of Engineering Thalassery**, Bachelor of Technology in Computer Science and Engineering June 2013 – May 2017

## Projects

---

### Centrim Life

- Developed a cloud-based platform to enhance the quality of life for consumers, family members and staffs in Aged care and Retirement living.
- Utilized AWS for cloud infrastructure to enhance scalability, security and performance of application, achieving 99.9% uptime and ensuring data integrity.
- Developed secure REST APIs to integrate third-party services, enhancing system interoperability.
- Tech Stack: Laravel, MySQL, jQuery, AWS, Git

### HRMS

- Launched an advanced HRMS solution that tracked employee availability and managed payroll, resulting in a 25% reduction in errors during payroll processing and detailed reporting to streamline HR operations.
- Reduced payroll errors by 25% through automated salary calculations, tax deductions, and compliance checks and developed custom reporting modules for attendance, leave management, and workforce analytics.
- Tech Stack: Laravel, Mysql, GIT, Javascript

### MLM Projects

- Implemented a scalable MLM platform supporting complex compensation plans (binary, matrix, uni-level) and dynamic tree structures for real-time member tracking and network visualization.
- Integrated multi-currency payment gateways (Eg. PayPal, Stripe) with automated commission along with detailed reportings and optimized database queries, reducing load times by 30%.
- Enhanced system performance by refactoring codebase, improving execution time by 20%.
