<https://www.linkedin.com/in/nimmi-sunder/>

PHP Developer with experience in building scalable Web Applications and Back End software systems using Server Side Scripting. Skilled in Software Engineering principles, Coding Standards, and Database Technologies. Contributed to Software Solutions involving API Interfaces, and secure data handling with a strong focus on Data Security, usability, and maintainable workflows. Experienced in Agile environments, collaborating with developers in a supportive team culture, delivering projects based on user stories and clear implementation plans.

PROFESSIONAL EXPERIENCE

AGILEENGINE

PHP Engineer(Payment Processing)

Miami ,USA

APRIL 2025 – Till Now

- Worked on the payment functionality of ELC's global e-commerce platforms (covering brands like MAC, Bobbi Brown, Estée Lauder, Balmain, Clinique, etc.), diagnosing and resolving critical bugs in payment flows, tax calculations, transaction validation, and settlement processes. Ensured smooth and secure order processing across multiple regions and currencies by fixing integration issues with payment gateways, tax services, and fulfillment systems.
- Technologies used Perl gem and Drupal

LATENT – AN ALPHA OBS LLP VENTURE

Sr.PHP Developer

Pune ,Mumbai

AUG 2022- FEB 2025

- Currently enhancing my programming skills by studying Python with a focus on developing efficient and scalable applications.
- Interated multiple payment gateways (**Stripe, Razor pay, Paypal**) for seamless transactions.
- Implemented a secure and efficient **S3** file storage solution, ensuring seamless handling and protection of project files
- In both Laravel and CodeIgniter, implemented seamless **Google** and **Facebook authentication** integrations, allowing users to log in using their social media accounts
- Implemented video and audio recording functionality using **RecordRTC** in CodeIgniter, enabling users to capture media directly within the application
- Have worked on integrating **Mailgun, SendGrid, SMTP, Brevo, and Mailtrap** for testing and email delivery .

NATIONAL INFORMATICS CENTRE, GOVT OF INDIA

Software Application Support Engineer

Thiruvananthapuram

MAY 2018 – DEC 2021

- Built a **CMS**-based projects in CodeIgniter
- Implemented pass generation using barcodes in CodeIgniter, enabling secure and efficient authentication for users
- Conducted **SEO Speed Optimization**, increasing page load speed from **50% to 94%**, resulting in a **30% to 40%** increase in website traffic
- Developed and implemented a government service that continues to operate in Kerala, enhancing efficiency and accessibility in public service delivery

VIARCH TECHNOLOGIES

Software Engineer

June 2017 – April 2018

- PicNpac: E-commerce app for online shopping. (CodeIgniter)
- Juntos: Food delivery app development

PROJECTS

Lease MP (Web Application) - Laravel

- Developed a Supplier Financing Platform where suppliers can submit new requirements, financiers can review and approve requests, and admins oversee the entire process.
- Integrated **DocuSign** for secure digital contract verification, ensuring compliance and authenticity.
- Implemented authentication using Laravel **Jetstream**, leveraging its robust features for secure user authentication and session management.

DMS - Laravel

- Developed a robust file management system to securely handle file uploads, downloads, and organization
- Added **role-based authorization** to ensure users can only access files they are authorized to view or modify.
- Integrated **multi-language support**, allowing users to interact with the system in various languages for broader accessibility.
- Enhanced the user experience, **Front End** by enabling file uploads through a drag-and-drop interface.
- Implemented encryption to ensure that sensitive files are stored securely .
- Added support for compressing files before upload to optimize storage and reduce upload times.

Online course portal -PYTHON DJANGO

Developed an online course portal using Python and Django, including a comprehensive admin panel for managing courses, users, and content. The platform enables course creation, enrollment, and tracking, with a user-friendly interface and robust backend management features.

Baash- Laravel

E-commerce website for party planners

- Implemented secure payment gateway using **Razorpay** to handle transactions for an e-commerce platform.
- Utilized Laravel's **queue** system for handling time-consuming tasks asynchronously, improving the responsiveness of the application.
- Integrated secure file upload functionality and leveraged Laravel's file storage system for managing product images and documents.

Vediclab

Developed an application for Vedic science (Switzerland).

- **API Development:** Created robust APIs in CodeIgniter to support the system's functionalities.
- **Stored Procedures:** Used stored procedures to generate exercise and food plans that repeat over one month.
- **Brevo Integration:** Integrated Brevo token for secure communication and transaction handling.
- **Triggers:** Implemented triggers to automate tasks and notifications within the system.

Wealthy Playmates(<https://wealthyplaymates.com>)

Developed a dating website for Ireland using CodeIgniter, ensuring smooth user experience and secure functionality.

- Integrated social login functionality, enabling users to authenticate using their Google, Facebook, and other social media accounts for easy access to the platform.
- Implemented Stripe payment gateway for secure and seamless online payments
- Integrated PayPal for payment processing, allowing users to make payments using their PayPal accounts in addition to credit/debit cards.

Trustedcarers (<https://trustedcarers.ie/>)

At Trusted Carers, families can find compassionate caregivers for their loved ones, while caregivers can also apply for job opportunities to provide their services.

- Integrated social login functionality, enabling users to authenticate using their Google, Facebook, and other social media accounts for easy access to the platform.
- Ensured secure and reliable payment event handling by verifying Stripe webhooks, ensuring that only legitimate events trigger actions like order confirmations and status updates

Synchemia- <https://www.synchemia.com>

Developed a pharmaceutical website using CodeIgniter.

- Designed and implemented the frontend for an optimal user experience and easy navigation.
- Built an intuitive and secure admin panel for managing content, users, and other website operations.

AIMS - <https://aims.kerala.gov.in>

Contributed to a government project for agricultural services like Subhiksha Keralam, crop insurance, and calamity relief, developed using CodeIgniter

Other Projects

- State Horticulture Mission: CMS-based project for horticultural services. (CodeIgniter) [View Website](<https://shm.kerala.gov.in>)
- SecurePass: Session management system for Kerala Legislative Assembly, with security audits conducted using IBM AppScan

TECHNICAL EXPERTISE

- Backend Development: PHP, Laravel, CodeIgniter, REST APIs, JWT Authentication ,Python, Django, Drupal ,React
- Databases: MySQL, MongoDB, PostgreSQL
- Web Technologies: HTML5, CSS, Bootstrap, JavaScript
- Architecture & Quality: MVC, Design Patterns, Scalability, Maintainability
- Tools & Process: Agile, Swagger API Docs, Git, Development Environments
- Soft Skills: Team-Oriented, User-Focused Development, Business Requirements

EDUCATION

College of Engineering, Perumon ,Kollam
B.Tech in IT Engineering - 72% 2011-2015
