91-9780929965

Result-driven Senior Software Engineer with over 12 years of experience in designing and developing high-performance backend systems, RESTful APIs architecture, and micro- services. Specialized in PHP frameworks like Laravel, Codeigniter and Zend with deep expertise in system architecture, scalable backend design and CI/CD pipelines. Proven record of mentoring teams, optimizing performance and driving clean, maintainable code aligned with PSR standards and CI/CD pipelines to deliver quality solutions under Agile environments.

Work Experience

Sr. Software Engineer

Ethixbase360

February 2022 to February 2022

About the Organization:

Ethixbase360 is a global third-party risk management and ESG compliance platform designed to help organizations identify, assess, and mitigate risks related to anti-bribery, corruption, modern slavery, and supply chain due diligence. It offers modular SaaS solutions enabling end-to-end risk assessment, due diligence and supplier engagement ensuring they meet international standards such as LkSG and UNGC.

Roles and Responsibilities:

- Lead the development and maintenance of micro-services and RESTful APIs for large- scale enterprise applications.
- Design and implement scalable system architectures (LLD&HLD) ensuring modularity, high availability, and performance optimization.
- Collaborate with product managers, QA, and DevOps teams to deliver features aligned with compliance and ESG objectives.
- Develop backend services and enhancing them supporting Third-Party Risk Management, ESG Assessments, and Due Diligence workflows.
- Conduct detailed code reviews, enforce PSR coding standards and promote clean code and Agile practices.
- Manage and mentor a team of 3 developers, guiding them in backend development and system design best practices.
- Build and maintain CI/CD pipelines to automate deployment, testing, and release processes for improved delivery efficiency.
- Integrate APIs and backend services with data-driven risk assessment modules ensuring secure and efficient data exchange.
- Optimize query performance and implement robust error handling to enhance reliability and response times.

- Contributed to enhancements of ESG and Supply Chain Due Diligence modules, improving Enterprise AI Platform (Recent Work / Initiative) :
- Backend
- Built and maintained REST APIs using FastAPI (versioned /api/v1) with structured validation and error handling.
 - Implemented Firestore-based workflows for enterprise features (user/admin, integrations, dashboards) .
 - Developed OAuth-based third-party integrations with validation and logging.
 - Wrote automated tests using pytest and followed strict linting/type practices.
 - Deployed and managed services on GCP (Cloud Run, secrets) with CI/CD via GitHub Actions and monitoring via Sentry
- Frontend (Secondary Contribution)
- Contributed to Next. js / TypeScript app (API integration, auth flows, client patterns)
- Key Technologies: PHP (Laravel) , MySQL, REST APIs, Docker, Git, GitHub, Postman, Jira, Agile, CI/CD Pipelines.
- Additionally: Python, FastAPI, Firestore, GCP, Sentry, pytest, GitHub Actions; working exposure to TypeScript, Next. js, Redux Toolkit, RTK Query.

Senior Developer

Seasia Consulting
May 2013 to May 2013

Overview:

Seasia Consulting is a CMMI Level 5 global software services company specializing in enterprise-grade web, mobile and digital transformation solutions. It delivers end-to-end product engineering, consulting, and technology-driven innovations across diverse industries.

Key Contributions:

- Designed and developed scalable backend systems, RESTful APIs, and admin dashboards for web and mobile applications using PHP (Laravel, CodeIgniter, Zend) and MySQL.
- Delivered full-stack solutions by integrating frontend components (HTML5, CSS3, Bootstrap, jQuery, Vue. js, Ajax) based on provided UI/UX designs, while ensuring smooth backend API support for Android and iOS teams.
- Managed end-to-end project development from architecture to deployment, including admin section features and client interactions.
- Collaborated with business analysts and QA teams to define, refine and validate workflows for diverse client projects.
- Mentored junior developers, conducted code reviews, and optimized application performance for maintainable, high-quality solutions.

Key Projects:

- Apexlink - (Laravel, jQuery, MySQL) - Led backend development and API integrations, implemented tenant and lease management modules and optimized database performance for large datasets.
- eTicketing - (Zend Framework, Doctrine ORM, jQuery) - Developed backend logic using

Doctrine ORM, built REST APIs for role-based workflows and integrated real-time

PHP Developer

August 2011 to August 2011

Overview:

Bhanguz was a startup software development company providing custom web and application development services for clients across e-commerce, social networking and automotive projects.

Key Contributions:

- Served as a full-cycle developer, handling end-to-end responsibilities including requirements gathering, backend and frontend development, testing, and deployment.
- Managed direct client communications to capture requirements, provide technical consultation, and ensure timely project delivery.
- Developed custom web applications, dynamic portals and API integrations using Core PHP, CodeIgniter, HTML5, CSS3, jQuery, Ajax, and MySQL and Responsive UI.
- Focused on delivering clean, reusable code and maintaining cross-browser and responsive UI performance.
- Gained strong exposure to client handling, multitasking across projects and full-stack ownership in a fast-paced startup environment.

Key Projects:

- Grittiz- (CorePHP, MySQL)-A social networking platform similar to Facebook, enabling users to create profiles, share posts and connect with other users.

Responsibilities: Built user authentication, messaging, and friend request modules with optimized query performance.

- Book Comparison Site- (CorePHP, API Integrations)-An online book comparison platform integrating APIs from Amazon and Alibis to display real-time pricing and availability.

Responsibilities: Designed backend scripts for API data synchronization, caching, and custom search algorithms.

- Auto Dealer Portal- (CodeIgniter, MySQL)-A car rental and inventory management system allowing dealers to manage vehicle listings, rentals and maintenance of records.

Responsibilities: Developed CRUD modules, reporting dashboards, and integrated role-based user management.

reporting and task tracking features.

- eLocations. com - (CodeIgniter, AngularJS, MySQL) - Architected backend APIs, implemented property mapping and reporting modules and optimized search and data retrieval processes.
- retail-study. com- (CodeIgniter, jQuery, MySQL)-Designed and developed reporting modules, dashboards and automated data aggregation features for real-time analytics.
- LitMox- (CodeIgniter, jQuery)-Built the backend logic for template management, user customization flows, and deployment automation to streamline marketing campaigns.

Education

computer Applications

Maters

CT

Institute of Management & IT-Punjab

Skills / IT Skills

- Cross-functional Collaboration
- Agile Delivery
- Mentoring
- Languages& Frameworks: PHP (Core, Laravel, CodeIgniter and Zend), JavaScript (ES6+, jQuery, Ajax), Python (FastAPI), Exposure to TypeScript, React, and Next.js. Databases: MySQL, Firestore, Doctrine ORM APIs, CMS & Aarchitecture: REST APIs, Microservices, MVC, LLD & HLD, Design patterns, Code Reviews, REST client integration (Bearer/JWT, token refresh, error handling); Sanity (headless CMS) Tools: Docker, Git, GitHub, Jira, Bitbucket, Docker CI/CD Pipelines, GCP (Cloud Run, Secret Manager), Sentry; exposure to Terraform and npm. Front-end: HTML5, CSS3, Bootstrap and Vue.js (practical experience: bug fixes and minor feature implementation) Standards: PSR Coding Standards, Agile Development and Test-Driven Development (TDD) and Review- Driven Delivery Leadership
- Ownership
- Problem Solving
- Communication
