EXPERIENCE ON

- PHP
- MySQL
- Git
- Linux

FRAMEWORKS & TECHNOLOGIES

- Laravel
- CodeIgniter
- WordPress
- HTML5
- CSS3
- JavaScript
- React
- Flutter
- Android Studio
- IntelliJ
- Visual Studio
- GitHub Copilot

RINTU GEORGE

SENIOR PHP DEVELOPER

EDUCATION

Bachelor of Engineering (B.E.)

Excel College of Technology, Erode

Computer Science & Engineering | Graduated: 2012

WORK EXPERIENCE

Faith Infosoft

Jan 2022 – Present

PHP Developer

Developed and maintained scalable web applications using PHP and MySQL. Acted as primary liaison between clients and development team, ensuring seamless project delivery. Implemented security best practices for sensitive user data protection.

- **Technologies Used:** PHP, MySQL, CodeIgniter, Laravel, JavaScript, React, Flutter

Maxwell Geosystems India Pvt Ltd

Mar 2015 - Mar 2016

PHP Programmer

Maintained and enhanced Mission OS real-time instrumentation and construction monitoring system. Provided critical backend support for monitoring solutions used in infrastructure projects. Performed performance tuning to ensure system reliability and uptime.

- **Technologies Used:** PHP, MySQL

Eden Innovative Infotech Pvt Ltd

Dec 2014 - Feb 2015

PHP Developer

Delivered multiple web development projects with focus on client satisfaction and timely completion. Collaborated with stakeholders to gather requirements and translate them into technical solutions.

- **Technologies Used:** PHP, MySQL

PHP Developer

Designed and developed administrator modules for diverse web-based applications. Specialized in backend development and database architecture design. Created efficient database schemas and implemented optimization strategies.

- **Technologies Used:** PHP, MySQL, CodeIgniter, HTML5, CSS3, JavaScript, WordPress

Key Projects

Mission OS - Monitoring System

Role: Maintenance, Support, and Feature Development

Built a real-time instrumentation monitoring system for construction and infrastructure projects focused on geographical measurement readings. The system collects and processes field data, generates graphical visualizations for trend analysis, and produces daily measurement reports to support site monitoring and decision-making. Implemented automated data handling, report generation, and a scalable backend architecture to ensure accuracy, reliability, and timely insights for project stakeholders.

School Management System

Role: Maintenance, Support, and Feature Development

Developed a scalable platform to manage student records and track academic performance, enabling centralized storage of student profiles, attendance, examinations, and grade histories. Implemented role-based access for administrators, teachers, and staff, along with reporting and analytics features to monitor academic progress and improve decision-making. Designed the system with a secure, modular architecture to support future growth, data integrity, and high performance across multiple academic years.

Parish Management System

Role: Maintenance, Support, and Feature Development

Centralized system for managing parish member details, sacraments, family records, certificates, notifications, and administrative workflows. The platform streamlines parish operations by digitizing member registration, sacramental records, and certificate generation, reducing manual effort and errors. Implemented role-based access for parish staff and administrators, automated notifications, and secure data management to ensure accuracy, confidentiality, and efficient service delivery across parish activities.

HRM

Role: Maintenance, Support, and Feature Development

1. Developed a comprehensive platform for managing NRI memberships, registrations, zone-wise reporting, and event coordination. The system centralized member data, automated registration workflows, and enabled region- and zone-level reporting to support administrative planning and decision-making. Implemented role-based access, secure data handling, and notification features to streamline communication and efficiently manage large, geographically distributed member bases.

2. Implemented an integrated solution for managing multiple schools, staff allocation, and jurisdiction-based administration. The system centralized school and staff data, automated staff assignment based on administrative rules and jurisdictions, and supported hierarchical oversight across educational departments. Included role-based access, reporting dashboards, and data validation to improve operational efficiency, transparency, and administrative control across institutions.

ERP

Role: Maintenance, Support, and Feature Development

Developed a comprehensive system to manage publication orders, billing, inventory, customer records, and production workflows. The platform streamlined order processing, automated invoicing, and tracked inventory levels while integrating production scheduling to ensure timely delivery. Implemented role-based access, reporting modules, and data validation to improve operational efficiency, accuracy, and coordination between sales, accounts, and production teams.
