- **MySQL** (Design, Optimization, Performance Tuning), postgresql, MongoDB
- **Version Control:** Git, GitHub
- **Other Tools:** Docker, Composer, Jira, Clickup, AWS, Laravel Forge

Qualification

MSc Computer Science from the College of Applied Science, Mg University -65% (Mar2011)

Bsc Physics , Mg University -65% (Mar2009)

10th & 12th CBSE, Jawahar Navodaya Vidyalaya, Kottayam , Kerala (Mar2006)

Professional Experience

1. Tech Lead: ValueLabs Technologies,Hyderabad from 2024 April – Feb 2025

Planning and the development of a sophisticated web portal for job placement built with Laravel and React.js , focusing on scalable architecture along with browser extension to capture all external job applications which will keep everything in the same place. Key responsibilities include Architecting and implementing complex backend solutions using Laravel, emphasizing code quality and performance optimization.

Achieved Star Of the Month award for the contributions.

2. Senior Software Developer: Appstation Pvt Ltd-Technopark, Trivandrum from 2022 Oct- 2023 Dec.

Appstation Pvt Ltd is a dynamic and innovative software development company which has the parent branch in Qatar specializing in mobile and web development. With a strong commitment to delivering cutting-edge technology solutions, Appstation Pvt Ltd has earned a reputation for excellence in the industry.

3. Senior Full Stack Developer: Tricta Technologies Pvt Ltd, Tvm, Kerala from 2020 Jan.

Led multiple projects using Laravel, AngularJS, Node.js, and SQL databases, managing both client relationships and team development. Architected technical solutions and mentored team members while ensuring successful project delivery and implementation

4. PHP Developer Contract: CCPLUS, from 2019 July to 2019 Dec.

Worked in maintaining and developing a few modules based on the Yii framework and MySQL.

5. Full Stack Developer: Zoondia Pvt Limited, Technopark, Trivandrum from 2015 August to 2019 June.

Worked on challenging projects. Learned and implemented Laravel, CodeIgniter, CakePHP, Zend and wordpress products.

E-Commerce Mobile Application development using React-Native ,Flutter and GraphQL APIs

Achieved Best Employee Award in 2017 on the efforts made.

6. Web Developer in Tech4travel Private Ltd, Technopark from 2012 September to 2015 July.

Worked on developing the front end for travel applications on Smalltalk based projects. Scraping data, DB management, and analyzing business models through client interaction.

Few Projects

Project : Recruiter Scooter , Role : Project Lead

Technologies involved :Laravel, React.js, PostgreSQL

Spearheaded the development of Recruiter Scooter Portal, a comprehensive recruitment platform that bridges employers and job seekers. The platform features an advanced matching system with integrated background verification processes.

Responsibilities

- Designed a scalable Laravel backend supporting real-time communication between recruiters and candidates.
- Designed complex database schemas in PostgreSQL to handle high-volume job postings and user interactions
- Implemented robust authentication and authorization systems to manage different user roles and permissions
- Developed RESTful APIs supporting seamless integration between Laravel backend and React.js frontend

Project : Immigration support app , Role : Lead Developer

Technologies involved : PHP,Laravel,MySQL

SettleMe App is for Canadian immigration which offers personalized checklists, updates, and resources, ensuring a user-friendly experience for individuals pursuing work, study, or residency opportunities in Canada.

Responsibilities

- Foster effective communication within the development team and collaborate with other stakeholders, including immigration experts, legal advisors, and user experience designers, to ensure the app meets both technical and regulatory requirements.
- Development and tasks management within the team and the timely delivery of apis to mobile team.
- Upgraded Laravel and bootstrap version to the latest.

Project : Wheels Owner, Role : Lead Developer

Technologies involved : PHP,Laravel,MySQL

I spearheaded the development of a comprehensive taxi vehicle management app available on both Android and iOS platforms.

Responsibilities

- Led end-to-end project management of the WheelsOwner app, including planning, development, database integration, and feature iterations based on user feedback.
- Collaborated across teams (UX/UI, QA) to ensure a seamless user experience and conducted thorough testing (functional, integration, UAT) for quality assurance.

Project : EducationCity Qatar, Role : Laravel Developer

Technologies involved : PHP,Laravel,MySQL

Education City features a user-friendly multilingual portal, mini ERP, and mobile apps, providing students with a seamless learning experience. The platform supports course, venue, and activity bookings, managing a large user database with millions of bookings.

Responsibilities

- Reduced development time to meet tight deadlines and actively engaged in debugging and implementing an extensive notification system.
- Led version upgrade to 10 and orchestrated database optimization and restructuring for enhanced efficiency.
- Contributed to the development of a RESTful API with a focus on ensuring backward compatibility.
