-

Projects

DarAlSafwa Property Rental Management system

Designed and implemented a full-featured Property Rental Management System using Laravel (PHP) and MySQL, allowing users to register, search, and book properties online while providing admin tools for property listing, complaint management, and agent/technician coordination through firebase.

Ecotourism Management system

Built a comprehensive Ecotourism Management System with Laravel (backend), React (frontend), and MySQL (database) integrating all Kerala forest ecotourism centers into a single platform, allowing users to search and book eco-packages while providing admins with complete control over bookings, packages, and center management through a secure role-based access system.

Aarohana ERP Management system

Built a modular ERP application with CodeIgniter (PHP) and MySQL supporting user service requests, tax payment management, and complete workflow tracking, featuring role-based staff logins, delay monitoring, and administrative dashboards for efficient service management.

Radel Logistics Management system

Designed and implemented a Logistics Management web and mobile application using CodeIgniter (PHP) and MySQL that allows administrators to track vehicle trips, inspections, and maintenance schedules, while drivers can log trip details and updates via the mobile app for real-time monitoring.

Online Car Rental System

This system allows users to check and book various cars available online. The project consists of a list of cars displayed in various categories and the user can browse through these cars and book cars. Online Car rental system project brings an entire car shop online, making it easy for both user and seller.

Front End - PHP, Back End – Mysql.

Aiossp Matrimony Management System

Designed and implemented a full-featured Matrimony web application using CodeIgniter (PHP) and MySQL enabling users to create profiles, search and match partners, make payments, and receive automated WhatsApp updates, while distributors and agencies manage user registrations and service operations through a secure admin dashboard.

STUDENT MANAGEMENT SYSTEM

A student management system is designed to record, analyze, and manage information in a school. The system also aids to do their manual tasks at easy and effectively such as material uploading, get student details, get fee details etc.

Framework: Codeigniter , Back end: Mysql
