Project	Ericsson License Activation and Support, Activation Statistics Tool, SERVE
Period	Dec 2020 – July 2022
Description	Ericsson License Activation and Support is an in-house developed tool for case management within the SW Supply area. It supports scenarios such as requests for ELIS activations, temporary keys, ELIS roles and access etc. Activation Statistics Tool is a web-based tool used to depict the ELIS license activations in graphical representation and to extract the reports in excel with the help of data synchronization from ELIS. Users can apply the different filters to get the detailed reports. The information can be viewed as number of transactions (Activations). SERVE (Search and Reserve) is a Web based tool used to setup locally sourced 3PP SW licenses as FAL119 products and make them orderable. It holds the information of vendors, agreements and software's related to a 3PP License. If a license is already owned by an Ericsson Company, then Serve allows to extend the existing License (FAL119) instead of adding a new FAL, which reduces the redundancy.
Role	Application Operation Lead
Activities	I worked as a AO lead for these Three applications. Actually, my team support for production environment and we fix issues in production env by creating change request. My team monitoring the applications daily basis and these applications hosted in Azure. So we will send weekly report and monthly report like capacity report and capability report to business stockholders.
Solution Environment	Code Igniter, MySql, jQuery, Azure Cloud, HTML, CSS
Tools	Visual Studio.

Project	Travelodge
Period	June 2020 – Oct 2020
Description	Travelodge Hotels Limited is a private company operating in the hotels and hospitality industry throughout the United Kingdom, Ireland and Spain. Known simply as <i>Travelodge</i>, it is the UK's largest independent hotel brand with over 570 limited-service hotels across the UK

VAIRAPRAKASAM M

Mobile No: +91-8939698808

Email id: vairaprakasam@gmail.com

Role	Offshore Associate
Activities	Travelodge application initially build by PHP framework symfony and MySql as a normal web application. Later client wants to change front end with React Js and API service for each functionality. We implement microservice for each functionality and send required information to React Js(Front End). We are responsible to create micro service to provide required data to front end.
Solution Environment	Symfony, MySql, React Js, Bitbucket, HTML, CSS
Tools	Visual Studio.
