PROFESSIONAL SUMMARY

Principal Backend Engineer with 13 years architecting and scaling production Laravel/PHP systems for IoT, enterprise SaaS, and real-time platforms. Led backend architecture + AWS infrastructure serving 500+ enterprise devices and SEA-wide field operations at 99.5% uptime with <200ms API latency. Drove 30% reduction in regression incidents via PHPUnit/TDD and accelerated feature delivery 40% by unblocking cross-functional teams. Mentored engineers, owned sprint delivery across US-timezone Agile teams, and reduced prod bug TAT 25%. Hands-on with Docker, CI/CD, React, and WebSocket for end-to-end ownership. Seeking Principal/Lead Backend roles owning architecture, reliability, and team delivery.

TECHNICAL SKILLS

Core PHP Skills

Backend	PHP 8.x, Laravel 10+, Codelgniter 4, Core PHP, REST API Design, JWT Authentication
Testing	PHPUnit, Unit Testing, TDD, Regression Testing
Databases	MySQL (query optimization, indexing, schema design), PostgreSQL, Firebase Realtime DB, Elasticsearch
Cloud & DevOps	Amazon AWS (EC2, S3, Lightsail), Git, Bitbucket, Gerrit Code Review, Docker, CI/CD
AI & Tools	GitHub Copilot, ChatGPT API Integration, Postman, Jira, PhpStorm, VS Code, Python Scripting
Architecture & Leadership	System Design Microservices High-Concurrency APIs Technical Mentoring Code Reviews Sprint Ownership Production Incident Response Cost Optimization

Additional Frontend Skills (Differentiator)

React JS (Hooks), JavaScript ES6+, jQuery, HTML5, CSS3, Bootstrap — enabling direct collaboration with frontend teams, faster prototyping, and end-to-end API integration testing without dependency on frontend developers.

Real-time: Socket.io, WebRTC (easyRTC) — hands-on experience building real-time communication features from the backend.

WORK EXPERIENCE

Senior PHP Developer | C²Perform India (Remote) |

July 2023 – May 2026 (Serving notice period) 2.8 Years

Enterprise SaaS — Contact Center Quality Management (Quality Audit, Dynamic Coaching, Knowledge Management)

- Diagnosed and resolved 60+ critical production bugs across a large-scale Core PHP/MySQL codebase, directly improving platform stability for enterprise US contact center operations.
- Built PHPUnit test suites covering critical business logic across coaching and audit workflows, reducing regression incidents by 30%.
- Leveraged GitHub Copilot and ChatGPT to bridge incomplete design specifications across 3 major modules, reducing feature delivery time by 40% on stalled sprint deliverables.
- Mentored junior developers through root-cause analysis on complex codebase issues, reducing average bug resolution time by 25%.

- Collaborated in Agile/Jira sprints, consistently delivering defect fixes and backend enhancements on schedule across US-timezone-aligned cycles.

PHP Developer | Kinitous (Remote) | Sept 2021 – Mar 2023 (1.5 Years)

Device Tracker Web App — Zebra Technologies (US Client)

- Built backend REST APIs and integrated Google Cloud real-time data streams powering a dashboard tracking 500+ enterprise mobile devices for Zebra Technologies.
- Integrated Google Maps APIs with live cloud data to deliver sub-second device location and status updates.

Skill Angels — Online Gaming Platform

- Engineered backend modules for a multi-player online puzzle gaming platform using PHP and PostgreSQL, handling concurrent game sessions.
- Built backend WebSocket infrastructure using Node.js and Socket.io to power real-time in-app peer-to-peer communication.

PHP Developer | WEBNEO Technologies, Madurai | May 2017 – Dec 2020 (3.6 Years)

Denyo Generators Remote Monitoring System — IoT Web App

- Developed a Laravel-based real-time IoT backend displaying live generator voltage charts, on/off controls, and run-time calendar tracking — deployed for field operations in Southeast Asia.
- Designed and implemented 15+ REST API endpoints receiving real-time IoT events (door alarms, voltage triggers) from field devices with under 200ms average response time.
- Managed full AWS infrastructure (EC2, S3, Lightsail) for production deployment, achieving 99.5% platform uptime.

HR Management Web Application

- Built leave management and working-hours tracking modules in Laravel with role-based access control (admin/employee) for a 200+ employee organization.
- Developed cart and admin role management system in CodeIgniter for a Coimbatore-based textile industry client.

Junior PHP Developer | Black Gold Innovations, Coimbatore | Feb 2013 – Apr 2017 (4.2 Years)

Elgg Social Networking Platform & Mobile App

- Built REST API web services for user authentication and post retrieval on a custom Elgg-based social network.
- Developed a cross-platform Android app using Apache Cordova/PhoneGap consuming custom REST APIs.

Cine Dairy Movie Blog & Hospital Management System

- Developed star-rating/review modules, photo gallery management, and live music streaming for a movie blog platform.
- Contributed to appointment registration, billing, and in-patient tracking modules for a multi-specialty hospital management system.
- Built a custom WordPress newsletter plugin that auto-fetches and distributes content from specified post categories.

KEY ACHIEVEMENTS

- Resolved 60+ critical production bugs at C2Perform, directly stabilizing a US enterprise SaaS platform serving contact center operations.
- Designed and shipped real-time IoT REST API backend for Denyo Generators processing live sensor data from field devices across Southeast Asia.
- Implemented PHPUnit test coverage that cut regression incidents by 30% across critical SaaS business logic.
- Maintained 99.5% uptime on AWS production infrastructure serving live IoT monitoring data.
- Accelerated feature delivery by 40% using AI-assisted tools to resolve incomplete design specs across 3 SaaS modules.

EDUCATION

B.E (Information Technology) | K.L.N. College of IT, Madurai | 2012
