Email:suneersulaiman@gmail.com

Over nine years of extensive experience in design, development, testing of software. Has worked in various phases of software development – Product/Application Requirements analysis, Design, Development, Testing and Deployment. Skilled in Front End and back-End Web Development.

Working as Full Stack Web Developer, having good Experience in
PHP, Laravel, Code Ignitor, Drupal, WordPress,
Next Js, React, React-Redux,Vue Js Ajax, JQuery
API Integration in Frontend and Backend

EDUCATION

- **B.tech** (Computer Science and Engineering), *Amrita Institute of Technology, Kerala, India.*
-

CAREER PROFILE

1. **Worked with Dell Technologies, Bangalore as a Technical Support Engineer (march 2013 - Oct 2015)**
2. **Worked with LM Technologies, Chennai as a Technical Support Engineer (march 2015 - Oct 2016)**
3.
4. **Worked Legus Solutions Pvt Ltd as Web Developer (Mar2016- Sep 2018)**
5. **Worked Blueline It Solutions Pvt Ltd as Web Developer (Oct 2018- Till this date)**

TECHNICAL SKILLS

Language : **PHP, Laravel, Code Ignitor, Drupal, WordPress**
Next Js, React, React-Redux, Vue Js Ajax, JQuery

- **Database** : **MySQL**

Project: AI-Powered Legal Documentation Management System

Platform / Environment: Laravel, React

- **Database** : MySQL

Project Description: Designed and developed a scalable AI-driven Legal Documentation Automation System with a Laravel 10 backend and React.js frontend architecture. The platform features multi-role authentication (Advocates, Clients, Students) using Laravel Sanctum and role-based access control (RBAC). Architected RESTful APIs to enable secure interaction between client and server, with support for dynamic document generation powered by Natural Language Processing (NLP) micro services (Python).

Implemented cloud-native file management with AWS S3 for secure PDF storage, and integrated GDPR- compliant security protocols including JWT authentication, data encryption, and audit logging.

Developed AI-assisted workflows to automate legal drafts, contracts, agreements, resumes, and government applications, reducing manual intervention and increasing accuracy. Incorporated real-time collaboration features for advocate groups, including secure file sharing and AI-enhanced document review. Focused on optimizing system performance with advanced caching strategies, lazy loading in React.js, and asynchronous API handling to ensure a seamless user experience even at scale. Led technical decision- making on architectural patterns, AI integration strategy, and cloud infrastructure deployment (AWS EC2, RDS)..

Project: Scalable Credit Risk Analysis Platform

Platform / Environment: Laravel, React

- **Database** : MySQL

Project Description: Designed and developed a full-stack credit verification system using Laravel for the backend and React.js for the frontend. It architected a RESTful API to efficiently handle asynchronous data ingestion from multiple third-party credit bureaus, including Experian and CIBIL. To ensure accuracy, implemented robust server-side validation, custom credit scoring algorithms, and data normalization pipelines using Laravel's Eloquent ORM. For scalable and secure file storage, leveraged AWS S3, dynamically storing file URLs in a MySQL database. Optimized request handling with asynchronous processing and secured API communications. Additionally, an automated reporting module to generate dynamic credit assessment reports, enhancing decision-making capabilities. Throughout the project, it focused on creating a highly available, scalable, and secure micro service architecture within the Laravel framework, ensuring seamless integration between the frontend and backend with React.js.

Project: Lead Management and Customer Relationship CRM Solution

Platform / Environment: Laravel, React

- **Database** : MySQL

Project Description : Designed and developed a custom CRM system for managing campaigns, agents, templates, leads, universities, colleges, courses, and customer data. Built secure multi-role authentication (Admin and Agent) with Laravel Framework, MySQL, and REST APIs. Integrated advanced reporting modules, including Lead Source Analysis, Lead Conversion Metrics, Agent Performance Dashboards, and Customer Engagement Reports. Implemented dynamic lead tracking, follow-up scheduling, and call activity management using Vue.js for real-time interactivity. Developed a responsive UI with Bootstrap 5 and customized Blade templates to ensure mobile- first accessibility. Followed modular architecture principles, applying SOLID principles and best practices in version control (Git/Bitbucket). Optimized database queries for high performance and enabled secure user sessions and role- based access control .

Project : Cartizone Ecommerce Platform

Platform / Environment: Laravel, React, Tailwind CSS

Database : MySQL

Project Description

- Cartizone is an Ecommerce Website, Optimized for Performances and easy management with all kind of advanced features. This project includes lot of features, Product management system with inventory tracking, categories and customizable attributes .Order Management system for streamlined order processing and fulfillment. User authentication and access control to secure store and manage user roles .Complete pricing control with base price, comparison price and cost price. Easy image uploads and create avatar with the support of AI, Allow customers to easily add products to their shopping cart, display a summary item in the cart enable customers to adjust the quantity of each item. Support product variants for customized options. Another Allow customers to apply discount codes or take advantages of promotions in the shopping cart. Another Pre-Integrated with Cash On Delivery, Bank Transfer and Stripe. Guest checkout also supported.

Project: Careline Hospital Management

Platform / Environment: Laravel, Livewire, Bootstrap, React

• **Markup Language** : HTML

Database : MySQL

Project Description

Careline adeptly handles the flow of appointments, doctors, patients and streamlined invoicing process. Medical institutions can effectively manage resources including professional staff, inventory and equipment. Elevated allocation and utilization result in reduced wait time, optimized patient flow and boosted operational efficiency. Core modules of this software allows for centralizing patients profiles, electronic health records, personal medical patient histories and treatment plan for improved care condition .It Automates the scheduling of appointments and gives medical staff control over patient flow, reducing wait times and human errors and optimizing resource allocation

.this systems streamline staff information, duty schedules, administrative task management, performance tracking and creating efficient workforce management .It provides the facility to allow tracking and managing.

Project: Sharestaes Crowd Funding

Platform / Environment: CodeIgnitor, Bootstrap,React

• **Markup Language** : HTML

Database : MySQL

Project Description

Sharestates is a crowdfunding group works as a platform between Investor and Borrower.

Sharestates offer investors direct access to real estate access to investments through their online market place, with typical net annualized returns. Borrowers can gain access to capital at a competitive rate, closing a deal in a fraction of the time it traditionally takes through a bank., minimizing the risk to investors and cost of capitals to borrowers. Different types of investor s participating are individual investors, institutional investors (Non-Performing Loan) investors

Project: Glencore Event Management System

Platform / Environment: .React Native, API Integration

Project Description

It empowers users to effectively plan, organize and manage events, having lot of features such as event registration, ticketing, event schedules and attendee management to enhance the functionality and streamline the event management process. It efficiently create and manage events by offering a platform where they can put essentials details such as event title, description date. Time, location, ticketing option and pricing. It allow users to register for events and purchase tickets online. Implement features such as ticket availability tracking, multiple ticket types, discounts and secure payment processing. It Provides a comprehensive listing of upcoming events including search and filtering options based on categories, dates locations or keywords. Enable users to view event details and register directly from the list

Project: Online Job Portal System

Platform / Environment: Woedpress,Open AI, API Integration

Project Description

It helps employers and job seekers to meet their respective objects. It serves jobseekers to find available job vacancies and employers to identify eligible job seekers. With the Online Job Portal, the recruitment process is speed up at every stage from job postings to receiving applications from candidates and the

Interviewing process. The main purpose of this System is to automate the existing manual system with the help of computerized equipment and full-fledged computer software, fulfilling their requirements so that their valuable data can be stored for a longer period with easy access and manipulation of the same.
