Akhilesh Chandran

Full Stack Developer

Highly motivated and skilled Python Full Stack Developer with a passion for web development. Recently graduated with btech degree in computer science/engineering, I am seeking a challenging position as a Python Full Stack Fresher to apply and enhance my knowledge in both front-end and back-end development.

Experience

- 07/2023-05/2024
Luminar Technolab I Kakkanad, Kochi
Python Full Stack Intern
 - As a Python Django Full Stack intern at Luminar Technolab located in Kakkanad, Kochi, I am actively engaged in gaining practical experience and honing my skills in web development.
 - In the course of my internship, I have successfully applied my knowledge of Django framework, database management with MySQL, and frontend design utilizing HTML, CSS, and Bootstrap to create robust and scalable web applications.
 - Looking ahead, I will expand my expertise further by studying React.js, REST API development, and JavaScript. to enhance my Web Development Skill
- 12/2021 - 12/2021
Techbyheart, Kochi
Internship
 - I have successfully completed an internship in TechByHeart, Kochi, on cybersecurity. The internship focused on topics related to cybersecurity, such as phishing, DoS attacks, and methods for prevention.
 - Participating in the internship at Techbyheart in Kochi provided me with valuable insights into cybersecurity and leadership.

Projects

- HOSPITAL MANAGEMENT SYSTEM
 - Developed an online platform with the intention of efficiently managing hospital operations and patient information.
 - The project aims to streamline hospital processes by centralizing patient records, appointments, and medical staff information under one system.
 - The entire system is overseen and controlled by authorized administrators within the hospital locality.
 - This project is a suggestive type and future enhancements can be done.
 - Technology Used: HTML, CSS, Bootstrap, Python Django,sqlite3
- VOICE BASED EMAIL SYSTEM FOR BLIND
 - Developed a Voice-Based Email System for the visually impaired, aiming to provide an accessible and intuitive platform for managing email communication using voice commands.
 - The primary goal of the project is to empower visually impaired individuals by enabling them to independently access and interact with their email accounts through voice commands.
 - Designed and implemented three core modules:-Voice Recognition Interface, Email Management System,User Authentication and Administration
 - Technology Used: HTML, CSS, Bootstrap, Python Django

JOB PORTAL

- It is a platform for the Jobseeker and HR of the company
- Jobseeker can Register, apply for jobs, View their applied jobs and related features etc.
- HR of the company can post the new openings, View how many students applied and related features etc.
- Technology Used: HTML, CSS, Bootstrap, Python Django, Mysql
